

### Features

- Double superhet architecture for high degree of image rejection
- FSK for digital data and FM reception for analog signal transmission
- FM/FSK demodulation with phase-coincidence demodulator
- Low current consumption in active mode and very low standby current
- Switchable LNA gain for improved dynamic range
- RSSI allows signal strength indication and ASK detection
- Surface mount package LQFP32

### Ordering Information

| <b>Part No.</b> | <b>Temperature Range</b> | <b>Package</b> |
|-----------------|--------------------------|----------------|
| TH71102         | -40 °C to 85°C           | LQFP32         |

### Application Examples

- General digital and analog 315 MHz or 433 MHz ISM band usage
- Low-power telemetry
- Alarm and security systems
- Keyless car and central locking
- Pagers

### Technical Data Overview

- Input frequency range: 300 MHz to 450 MHz
- Power supply range: 2.5 V to 5.5 V
- Temperature range: -40 °C to +85 °C
- Operating current: 6.5 mA at low gain and 8.2 mA at high gain mode
- Standby current: < 100 nA
- Sensitivity: -111 dBm<sup>1)</sup> with 40 kHz second IF filter BW (incl. SAW front-end filter loss)
- Sensitivity: -104 dBm<sup>2)</sup> with 150 kHz second IF filter BW (incl. SAW front-end filter loss)
- Range of first IF: 10 MHz to 80 MHz
- Range of second IF: 455 kHz to 21.4 MHz
- Maximum input level: -10 dBm at ASK and 0 dBm at FSK
- Image rejection: > 65 dB (e.g. with SAW front-end filter and at 10.7 MHz 2<sup>nd</sup> IF)
- Spurious emission: < -70 dBm
- Input frequency acceptance: ±50 kHz (with AFC option)
- RSSI range: 70 dB
- Frequency deviation range: ±5 kHz to ±120 kHz
- Maximum data rate: 80 kbit/s NRZ
- Maximum analog modulation frequency: 15 kHz

<sup>1)</sup> at ± 8 kHz FSK deviation, BER = 3·10<sup>-3</sup> and phase-coincidence demodulation

<sup>2)</sup> at ± 50 kHz FSK deviation, BER = 3·10<sup>-3</sup> and phase-coincidence demodulation

## General Description

The TH71102 receiver IC consists of the following building blocks:

- PLL synthesizer (PLL SYNTH) for generation of the first and second local oscillator signals LO1 and LO2
- Parts of the PLL SYNTH are the high-frequency VCO1, the feedback dividers DIV\_8 and DIV\_2, a phase-frequency detector (PFD) with charge pump (CP) and a crystal-based reference oscillator (RO)
- Low-noise amplifier (LNA) for high-sensitivity RF signal reception
- First mixer (MIX1) for down-conversion of the RF signal to the first IF (IF1)
- second mixer (MIX2) for down-conversion of the IF1 to the second IF (IF2)
- IF amplifier (IFA) to amplify and limit the IF2 signal and for RSSI generation
- Phase coincidence demodulator (DEMODO) with third mixer (MIX3) to demodulate the IF signal
- Operational amplifier (OA) for data slicing, filtering and ASK detection
- Bias circuitry for bandgap biasing and circuit shutdown

With the TH71102 receiver chip, various circuit configurations can be arranged in order to meet a number of different customer requirements. For FM/FSK reception the IF tank used in the phase coincidence demodulator can be constituted either by a ceramic resonator or an LC tank (optionally with a varactor diode to create an AFC circuit). In ASK configuration, the RSSI signal is feed to an ASK detector, which is constituted by the operational amplifier.

| Demodulation    | Type of receiver                              |
|-----------------|---|
| <b>FM / FSK</b> | narrow-band RX with ceramic demodulation tank |
| <b>FM / FSK</b> | wide-band RX with LC demodulation tank        |
| <b>ASK</b>      | RX with RSSI-based demodulation               |

The superheterodyne configuration is double conversion where MIX1 and MIX2 are driven by the internal local oscillator signals LO1 and LO2, respectively. This allows a high degree of image rejection, achieved in conjunction with an RF frontend filter. Efficient RF frontend filtering is realized by using a SAW, ceramic or helix filter in front of the LNA and by adding an LC filter at the LNA output.

A single-conversion variant, called TH71101, is also available. Both RXICs have the same die. At the TH71101 the second mixer MIX2 operates as an amplifier.

Block Diagram

Fig. 1: TH71102 block diagram

### Frequency Planning

Frequency planning is straightforward for single-conversion applications because there is only one IF that might be chosen, and then the only possible choice is low-side or high-side injection of the LO1 signal (which is now the one and only LO signal in the receiver).

The receiver's double-conversion architecture requires careful frequency planning. Besides the desired RF input signal, there are a number of spurious signals that may cause an undesired response at the output. Among them are the image of the RF signal (that must be suppressed by the RF front-end filter), spurious signals injected to the first IF (IF1) and their images which could be mixed down to the same second IF (IF2) as the desired RF signal (they must be suppressed by the LC filter at IF1 and/or by low-crosstalk design).

By configuring the TH71102 for double conversion and using its internal PLL synthesizer with fixed feedback divider ratios of  $N1 = 8$  (DIV\_8) and  $N2 = 2$  (DIV\_2), four types of down-conversion are possible: low-side injection of LO1 and LO2 (**low-low**), LO1 low-side and LO2 high-side (**low-high**), LO1 high-side and LO2 low-side (**high-low**) or LO1 and LO2 high-side (**high-high**). The following table summarizes some equations that are useful to calculate the crystal reference frequency (REF), the first IF (IF1) and the VCO1 or first LO frequency (LO1), respectively, for a given RF and second IF (IF2).

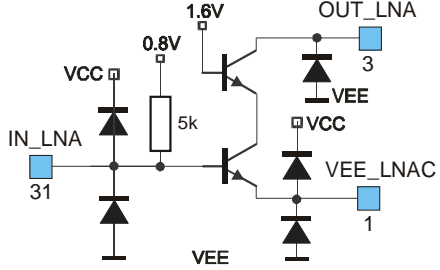

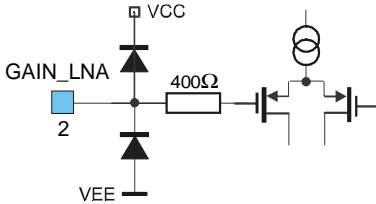

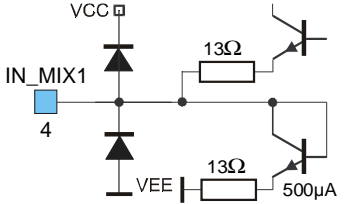

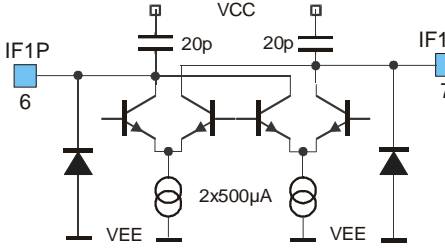

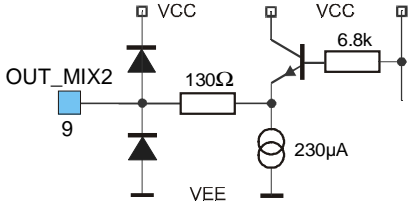

| Injection type | high-high        | low-low          | high-low         | low-high         |
|----------------|------------------|------------------|------------------|------------------|
| REF            | $(RF - IF2)/14$  | $(RF - IF2)/18$  | $(RF + IF2)/14$  | $(RF + IF2)/18$  |
| LO1            | $16 \bullet REF$ | $16 \bullet REF$ | $16 \bullet REF$ | $16 \bullet REF$ |
| IF1            | $LO1 - RF$       | $RF - LO1$       | $LO1 - RF$       | $RF - LO1$       |
| LO2            | $2 \bullet REF$  | $2 \bullet REF$  | $2 \bullet REF$  | $2 \bullet REF$  |
| IF2            | $LO2 - IF1$      | $IF1 - LO2$      | $IF1 - LO2$      | $LO2 - IF1$      |

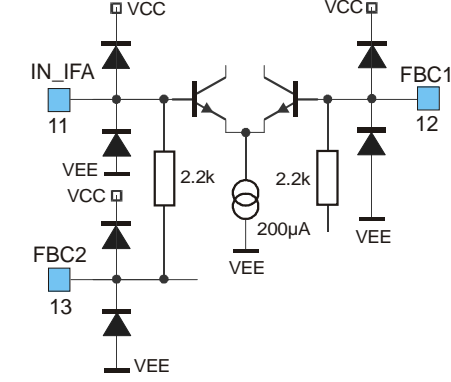

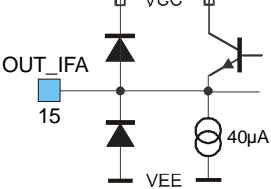

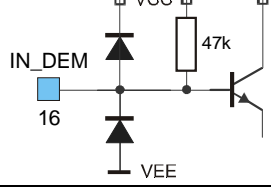

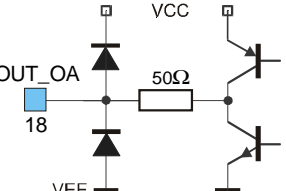

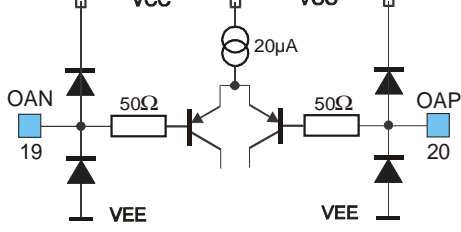

The following table depicts generated, desired, possible images and some undesired signals considering the examples of 315 MHz and 433.6 MHz RF reception at  $IF2 = 10.7$  MHz.

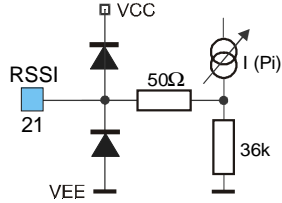

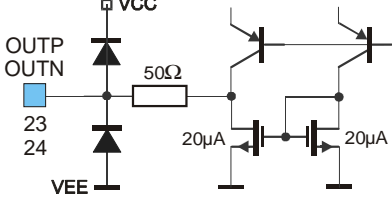

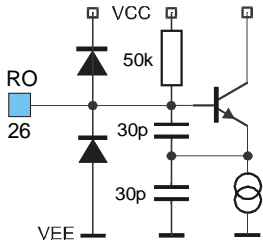

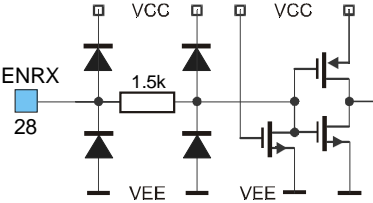

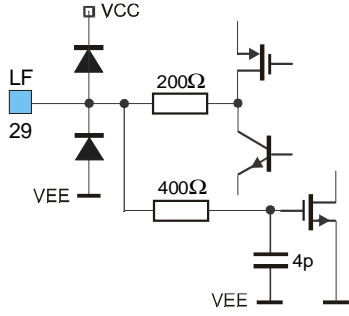

| Signal type    | RF = 315 MHz | RF = 315 MHz | RF = 315 MHz     | RF = 315 MHz | RF = 433.6 MHz | RF = 433.6 MHz   | RF = 433.6 MHz | RF = 433.6 MHz |
|----------------|--------------|--------------|------------------|--------------|----------------|------------------|----------------|----------------|
| Injection type | high-high    | low-low      | high-low         | low-high     | high-high      | low-low          | high-low       | low-high       |
| REF / MHz      | 21.73571     | 16.90556     | <b>23.26429</b>  | 18.09444     | 30.20714       | <b>23.49444</b>  | 31.73571       | 24.68333       |
| LO1 / MHz      | 347.77143    | 270.48889    | <b>372.22857</b> | 289.51111    | 483.31429      | <b>375.91111</b> | 507.77143      | 394.93333      |
| IF1 / MHz      | 32.77143     | 44.51111     | <b>57.22857</b>  | 25.48889     | 49.71429       | <b>57.68889</b>  | 74.17143       | 38.66667       |
| LO2 / MHz      | 43.47143     | 33.81111     | <b>46.52857</b>  | 36.18889     | 60.41429       | <b>46.98889</b>  | 63.47143       | 49.36667       |
| RF image/MHz   | 380.54286    | 225.97778    | <b>429.45714</b> | 264.02222    | 533.02857      | <b>318.22222</b> | 581.94286      | 356.26667      |
| IF1 image/MHz  | 54.17143     | 23.11111     | <b>35.82857</b>  | 46.88889     | 71.11429       | <b>36.28889</b>  | 52.77143       | 60.06667       |

The selection of the reference crystal frequency is based on some assumptions. As for example: the first IF and the image frequencies should not be in a radio band where strong interfering signals might occur (because they could represent parasitic receiving signals), the LO1 signal should be in the range of 300 MHz to 430 MHz (because this is the optimum frequency range of the VCO1). Furthermore the first IF should be as high as possible to achieve highest RF image rejection. The columns in bold depict the selected frequency plans to receive at 315 MHz and 433.6 MHz, respectively.

### Pin Definition and Description

| Pin No. | Name     | I/O Type      | Functional Schematic   | Description   |
|---------|----------|---------------|--|---|
| 3       | OUT_LNA  | analog output |    | LNA open-collector output, to be connected to external LC tank that resonates at RF   |
| 31      | IN_LNA   | analog input  |  | LNA input, approx. 26Ω single-ended   |
| 1       | VEE_LNAC | ground        |  | ground of LNA core (cascode)  |
| 2       | GAIN_LNA | analog input  |    | LNA gain control (CMOS input with hysteresis)   |
| 4       | IN_MIX1  | analog input  |    | MIX1 input, approx. 33Ω single-ended  |
| 5       | VEE_MIX  | ground        |  | LNA biasing ground  |
| 6       | IF1P     | analog I/O    |  | open-collector output, to be connected to external LC tank that resonates at first IF |
| 7       | IF1N     | analog I/O    |  | open-collector output, to be connected to external LC tank that resonates at first IF |
| 8       | VCC_MIX  | supply        |  | MIX1 and MIX2 positive supply   |
| 9       | OUT_MIX2 | analog output |  | MIX2 output, approx. 330Ω output impedance  |
| 10      | VEE_IF   | ground        |  | ground for MIX2, IFA and DEMOD  |

| Pin No. | Name     | I/O Type      | Functional Schematic   | Description  |
|---------|----------|---------------|--|--|
| 11      | IN_IFA   | analog input  |    | IFA input, approx. 2.2kΩ input impedance   |
| 12      | FBC1     | analog I/O    |  | to be connected to external IFA feedback capacitor   |
| 13      | FBC2     | analog I/O    |  | to be connected to external IFA feedback capacitor   |
| 14      | VCC_IF   | supply        |  | positive supply for IFA, DEMOD   |
| 15      | OUT_IFA  | analog I/O    |    | IFA output and MIX3 input (of DEMOD)   |
| 16      | IN_DEM   | analog input  |   | DEMOD input, to MIX3 core  |
| 17      | VCC_BIAS | supply        |  | positive supply of general bias system and OA  |
| 18      | OUT_OA   | analog output |   | OA output, 40uA current drive capability   |
| 19      | OAN      | analog input  |  | negative OA input, input voltage limited to approx. 0.7 V <sub>pp</sub> between pins OAP and OAN |
| 20      | OAP      | analog input  |  | negative OA input, input voltage limited to approx. 0.7 V <sub>pp</sub> between pins OAP and OAN |

| Pin No. | Name     | I/O Type      | Functional Schematic   | Description  |
|---------|----------|---------------|--|--|
| 21      | RSSI     | analog output |     | RSSI output, for RSSI and ASK detection, approx. 36kΩ output impedance |
| 22      | VEE_BIAS | ground        |  | ground for general bias system and OA                                  |
| 23      | OUTP     | analog output |    | FSK/FM positive output, output impedance of 100kΩ to 300kΩ             |
| 24      | OUTN     | analog        |  | FSK/FM negative output, output impedance of 100kΩ to 300kΩ             |
| 25      | VEE_RO   | ground        |  | ground of dividers, PFD and RO   |
| 26      | RO       | analog input  |    | RO input, Colpitts type oscillator with internal feedback capacitors   |
| 27      | VCC_PLL  | supply        |  | positive supply of RO, DIV, PFD and charge pump                        |
| 28      | ENRX     | digital input |  | mode control input (CMOS Input)  |
| 29      | LF       | analog output |   | charge pump output and VCO1 control input                              |
| 30      | VEE_LNA  | ground        |  | LNA biasing ground   |
| 32      | VCC_LNA  | supply        |  | positive supply of LNA biasing   |

## Technical Data

### Mode Configurations

| ENRX | Mode | Description        |
|------|------|--------------------|
| 0    | SBY  | standby mode       |
| 1    | ON   | entire chip active |

**Note:** ENRX are pulled down internally

### LNA Gain Control

| V <sub>GAIN_LNA</sub> | Mode      | Description                                 |
|-----------------------|-----------|---|
| < 0.8 V               | HIGH GAIN | LNA set to high gain by voltage at GAIN_LNA |
| > 1.4 V               | LOW GAIN  | LNA set to low gain by voltage at GAIN_LNA  |

**Note:** hysteresis between gain modes to ensure stability

### Absolute Maximum Ratings

| Parameter               | Symbol            | Condition / Note  | Min   | Max                  | Unit |
|-------------------------|-------------------|---|-------|----------------------|------|
| Supply voltage          | V <sub>cc</sub>   |   | 0     | 7.0                  | V    |
| Input voltage           | V <sub>IN</sub>   |   | - 0.3 | V <sub>cc</sub> +0.3 | V    |
| Input RF level          | P <sub>imax</sub> | no damage   |       | 10                   | dBm  |
| Storage temperature     | T <sub>STG</sub>  |   | -40   | +125                 | °C   |
| Electrostatic discharge | ESD               | human body model, MIL STD 833D method 3015.7, all pins except OUT_IFA | -500  | +500                 | V    |
|                         |                   | pin OUT_IFA   | -500  | +250                 | V    |

### Normal Operating Conditions

| Parameter             | Symbol           | Condition    | Min | Max  | Unit   |
|-----------------------|------------------|--------------|-----|------|--------|
| Supply voltage        | V <sub>cc</sub>  |              | 2.5 | 5.5  | V      |
| Operating temperature | T <sub>a</sub>   |              | -40 | +85  | °C     |
| Input frequency       | f <sub>i</sub>   |              | 300 | 450  | MHz    |
| Frequency deviation   | Δf               | at FM or FSK | ±5  | ±120 | kHz    |
| FSK data rate         | R <sub>FSK</sub> | NRZ          |     | 40   | kbit/s |
| FM bandwidth          | f <sub>m</sub>   |              |     | 15   | kHz    |
| ASK data rate         | R <sub>ASK</sub> | NRZ          |     | 80   | kbit/s |

### DC Characteristics

all parameters under normal operating conditions, unless otherwise stated;  
typical values at  $T_a = 23\text{ }^\circ\text{C}$  and  $V_{cc} = 3\text{ V}$

| Parameter                         | Symbol           | Condition                                   | Min  | Typ | Max  | Unit |

**FSK Circuit with AFC and Ceramic Resonator Tolerance Compensation**

Fig. 3: Test circuit for FSK with AFC and resonator compensation

**Circuit Feature**

- Improves input frequency acceptance range up to  $RF_{nom} \pm 50$  kHz
- Eliminates calibration tolerances of ceramic resonator
- Eliminates temperature tolerances of ceramic resonator
- Non-inverted and inverted CMOS-compatible outputs

**FSK test circuit with AFC component list to Fig. 3**

Devices sold by Melexis are covered by the warranty and patent indemnification provisions appearing in its Term of Sale. Melexis makes no warranty, express, statutory, implied, or by description regarding the information set forth herein or regarding the freedom of the described devices from patent infringement. Melexis reserves the right to change specifications and prices at any time and without notice. Therefore, prior to designing this product into a system, it is necessary to check with Melexis for current information. This product is intended for use in normal commercial applications. Applications requiring extended temperature range, unusual environmental requirements, or high reliability applications, such as military, medical life-support or life-sustaining equipment are specifically not recommended without additional processing by Melexis for each application.

The information furnished by Melexis is believed to be correct and accurate. However, Melexis shall not be liable to recipient or any third party for any damages, including but not limited to personal injury, property damage, loss of profits, loss of use, interrupt of business or indirect, special incidental or consequential damages, of any kind, in connection with or arising out of the furnishing, performance or use of the technical data herein. No obligation or liability to recipient or any third party shall arise or flow out of Melexis' rendering of technical or other services.
