## F<sup>2</sup>MC-8L MB89190/190A Series

**MB89191/193/195/P195/PV190****MB89191A/191AH/193A/193AH/195A/P195A/PV190A**

### ■ OUTLINE

The MB89190/190A series microcontrollers contain various resources such as timers, serial interfaces, A/D converters, external interrupts, and remote-control functions, as well as an F<sup>2</sup>MC\*-8L CPU core for low-voltage and high-speed operations. These single-chip microcontrollers are suitable for small devices such as remote controllers with compact packages.

\*: F<sup>2</sup>MC stands for FUJITSU Flexible Microcontroller.

### ■ FEATURES

- Minimum execution time: 0.95  $\mu$ s at 4.2 MHz ( $V_{CC} = 2.7$  V)
- F<sup>2</sup>MC-8L family CPU core
- Two timers
  - 8/16-bit timer/counter
  - 20-bit timebase counter
- Serial interface
  - 8-bit synchronous serial (Selectable transfer direction allows communication with various equipment.)

*(Continued)*

### ■ PACKAGE

28-pin Plastic SOP

(FPT-28P-M17)

28-pin Plastic DIP

(DIP-28P-M05)

28-pin Plastic SH-DIP

(DIP-28P-M03)

48-pin Ceramic MQFP

(MQP-48C-P01)

# MB89190/190A Series

(Continued)

- External interrupts  
Edge detection (Selectable edge): 3 channels  
Low-level interrupt (Wake-up function): 8 channels
- A/D converter (MB89190A series only)  
8-bit successive approximation type: 8 channels
- Built-in remote-control transmitting frequency generator
- Low-power consumption modes  
Stop mode (Almost no current consumption occurs because oscillation stops.)  
Sleep mode (The current consumption is reduced about 1/3 of that during normal operation because the CPU stops.)
- Packages  
SOP-28, SH-DIP-28, and DIP-28

## ■ PRODUCT LINEUP

Part number Item	MB89191 MB89191A MB89191AH	MB89193 MB89193A MB89193AH	MB89195 MB89195A	MB89P195 MB89P195A	MB89PV190 MB89PV190A
Classification	Mask ROM products			One-time product	For development and evaluation
ROM size	4 K × 8 bits (internal mask ROM)	8 K × 8 bits (internal mask ROM)	16 K × 8 bits (internal mask ROM)	16 K × 8 bits (internal PROM, to be programmed with general-purpose EPROM programmer)	32 K × 8 bits (external ROM)
RAM size	128 × 8 bits	256 × 8 bits			
CPU functions	The number of basic instructions: 136 Instruction bit length: 8 bits Instruction length: 1 to 3 bytes Data bit length: 1, 8, and 16 bits Minimum execution time: 0.95 μs at 4.2 MHz Interrupt processing time: 8.57 μs at 4.2 MHz				
Ports	Output port (N channel open drain): 4 (also serves as peripherals for MB89190A series) or 6 (for MB89190 series) I/O port (CMOS): 16 (also serves as peripherals) Total: 20 or 22				
Timer counter	2 channels of 8-bit timer counter or one 16-bit event counter (operation clock: 1.9 μs, 30.4 μs, and 487.6 μs at 4.2 MHz, and external clock)				
Serial I/O	8 bits LSB/MSB first selectable Transfer clock (external, 1.9 μs, 7.6 μs, 30.4 μs at 4.2 MHz)				
A/D converter (MB89190A series only)	8 bits × 8 channels A/D conversion mode (conversion time: 41.9 μs at 4.2 MHz) Sense mode (conversion time: 11.9 μs at 4.2 MHz) Capable of continuous activation by an internal timer. Reference voltage input

# MB89190/190A Series

## ■ DIFFERENCES AMONG PRODUCTS

### 1. Memory Size

Before evaluating using the piggyback model, verify its difference from the model that will actually be used. Take particular care on the following points:

- On the MB89191/191A, addresses 0140<sub>H</sub> to 0180<sub>H</sub> cannot be used for register banks.
- The stack area, etc., is set in the upper limit of the RAM.

### 2. Current Consumption

- In the case of MB89PV190/PV190A, added is the current consumed by the EPROM which is connected to the top socket.
- When operated at low speed, the products with an OTPROM (EPROM) will consume more current than the products with a mask ROM.  
However, the same is current consumption in the sleep/stop mode. (For more information, see “■ Electrical Characteristics.”)

### 3. Mask Options

Functions that can be selected as options and how to designate these options vary with product.

Before using options, check “■ Mask Options.”

Take particular care on the following points:

- Pull-up resistor optional cannot be set for P00 to P03, and P40 to P45 on the MB89191A/193A/195A/P195A.
- The power-on reset option is fixed as “enabled” for MB89P195/P195A.
- Options are fixed on the MB89PV190/PV190A.

### 4. MB89191AH/MB89193AH

MB89191AH/193AH are “L” level heavy output current drive type of P30 to P32 and P40 to P43 of MB89191A/193A. Characteristics other than “L” level output of P30 to P32 and P40 to P43 are the same as MB89191A/193A.

## ■ PIN DESCRIPTION

Pin no.		Pin name	Circuit type	Function
SOP <sup>*1</sup> , DIP <sup>*2</sup> SH-DIP <sup>*3</sup>	MQFP <sup>*4</sup>			
7	31	X0	A	Clock oscillation pins
8	32	X1		
5	29	TEST	B	Test input pin Connect directly to V <sub>ss</sub> .
6	30	$\overline{\text{RST}}$	C	Reset I/O pin This pin consists of an N-ch open-drain output with a pull-up resistor and of hysteresis input. A low level is output from this pin by internal source. The internal circuit is initialized by the input of a low level.
24 to 27	12 13, 23, 24	P00/ $\overline{\text{INT20}}$ / AN4 to P03/ $\overline{\text{INT23}}$ /AN7	G	General-purpose I/O ports Also serve as external interrupt input pins. In the MB89190A series, also serve as analog input pins. External interrupt input is of hysteresis input type.
1 to 4	25 to 28	P04/ $\overline{\text{INT24}}$ to P07/ $\overline{\text{INT27}}$	D	General-purpose I/O ports Also serve as external interrupt input. External interrupt input is of hysteresis input type.
17	5	P30/SCK	D	General-purpose I/O port Also serves as clock I/O for the 8-bit serial I/O interface. The serial I/O clock input is of hysteresis input type with a built-in noise filter.
16	4	P31/SO	E	General-purpose I/O port Also serves as a serial I/O data output pin.
15	3	P32/SI	D	General-purpose I/O port Also serves as a serial I/O data input pin. The serial I/O data input is of hysteresis input type with a built-in noise filter.
14	2	P33/EC	D	General-purpose I/O port Also serves as an external clock input pin for the 8-bit timer/counter. External clock input of the 8-bit timer/counter is hysteresis input type with a built-in noise filter.
13	1	P34/TO/ INT10	D	General-purpose I/O port Also serves as the overflow output and external interrupt input for the 8-bit timer/counter. External interrupt input is of hysteresis input type with a built-in noise filter.

# MB89190/190A Series

## ■ HANDLING DEVICES

### 1. Preventing Latch-up

Latchup may occur on CMOS ICs if voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to input or output pins other than medium- and high-voltage pins or if higher than the voltage which shows on “1. Absolute Maximum Ratings” in “■ Electrical Characteristics” is applied between  $V_{CC}$  to  $V_{SS}$ .

When latchup occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

Also, take care to prevent the analog power supply ( $AV_{CC}$  and  $AVR$ ) and analog input from exceeding the digital power supply ( $V_{CC}$ ) when the analog system power supply is turned on and off.

### 2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to pull-up or pull-down resistor.

### 3. Treatment of Power Supply Pins on Microcontrollers with A/D and D/A Converters

Connect to be  $AV_{CC}=DAVC=V_{CC}$  and  $AV_{SS}=AVR=V_{SS}$  even if the A/D and D/A converters are not in use.

### 4. Treatment of N.C. Pin

Be sure to leave (internally connected) N.C. pins open.

### 5. Power Supply Voltage Fluctuations

Although operation is assured within the rated range of  $V_{CC}$  power supply voltage, a rapid fluctuation of the voltage could cause malfunctions within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that  $V_{CC}$  ripple fluctuations (P-P value) will be less than 10% of the standard  $V_{CC}$  value at the commercial frequency (50 to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

### 6. Precautions when Using an External Clock

Even when an external clock is used, oscillation stabilization time is required for power-on reset (optional) and release from stop mode.

# MB89190/190A Series

## ■ PROGRAMMING TO PROM ON THE MB89P195/P195A

The MB89P195/P195A can program data in the internal PROM using a dedicated conversion adaptor and specified general-purpose EPROM programmer.

### 1. Memory Space

#### • Programming procedure

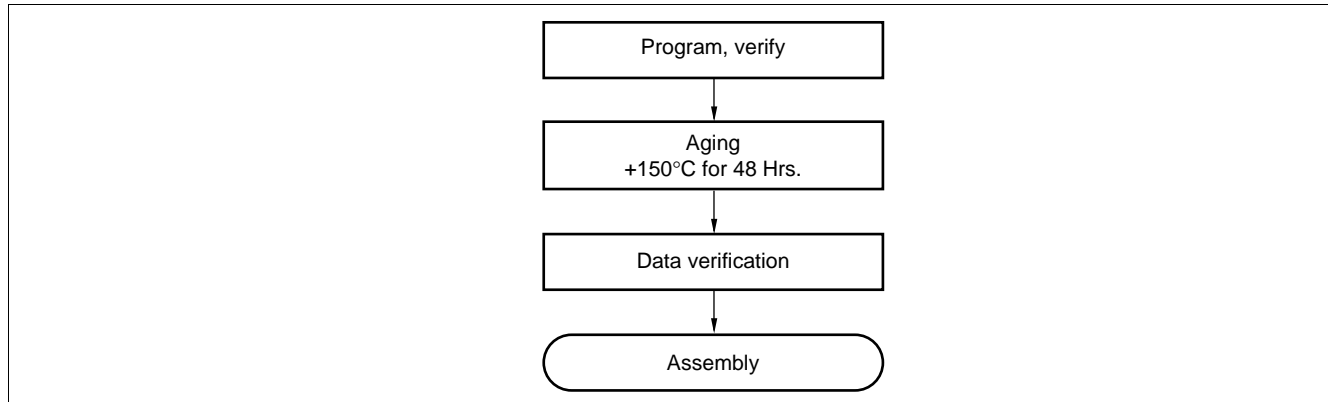

- (1) Load program data into the ROM programmer at addresses 4000<sub>H</sub> to 7FFF<sub>H</sub>. (Addresses 0C000<sub>H</sub> to 0FFFF<sub>H</sub> in the operation mode correspond to 4000<sub>H</sub> to 7FFF<sub>H</sub> in ROM programmer. See the illustration above.)
- (2) Set the data at addresses 0000<sub>H</sub> to 3FFF<sub>H</sub> of the programmer ROM in the ROM programmer, to FF<sub>H</sub>.
- (3) Program in the successive-address write mode of the ROM programmer.

Note: Program must be started at the address 00000<sub>H</sub>.  
For details, contact our Sales Division.

# MB89190/190A Series

## 2. Recommended Screening Conditions

High-temperature aging is recommended as the pre-assembly screening procedure for a product with a blanked OTPROM microcontroller program.

## 3. Programming Yield

Due to its nature, bit programming test can't be conducted as Fujitsu delivery test. For this reason, a programming yield of 100% cannot be assured at all times.

## 4. EPROM Programmer Socket Adapter

### 3. Memory Space

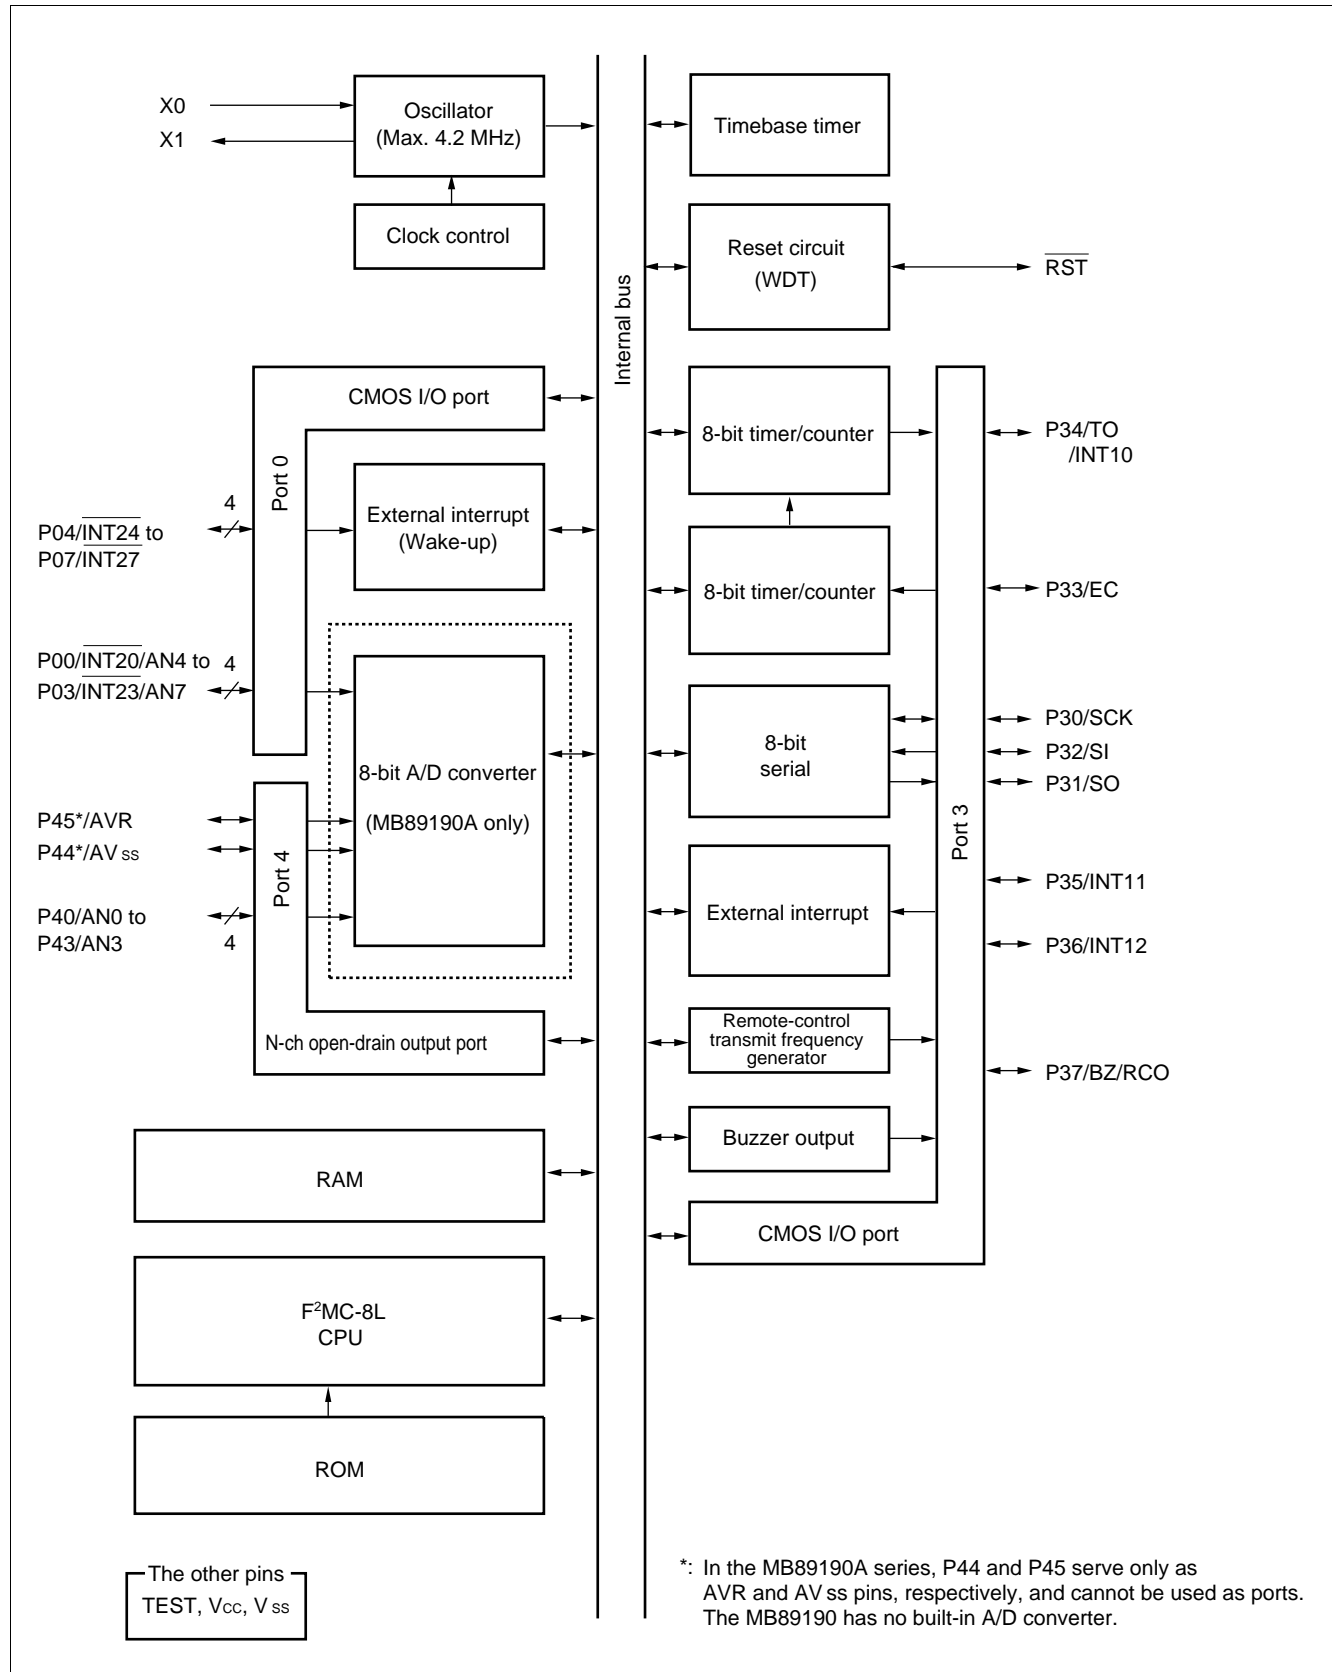

### 4. Programming to the EPROM

- (1) Set the EPROM programmer for MBM27C256A.
- (2) Load program data into the EPROM programmer at 0000<sub>H</sub> to 7FFF<sub>H</sub>.
- (3) Program to 0000<sub>H</sub> to 7FFF<sub>H</sub> with the EPROM programmer.

# MB89190/190A Series

## ■ BLOCK DIAGRAM

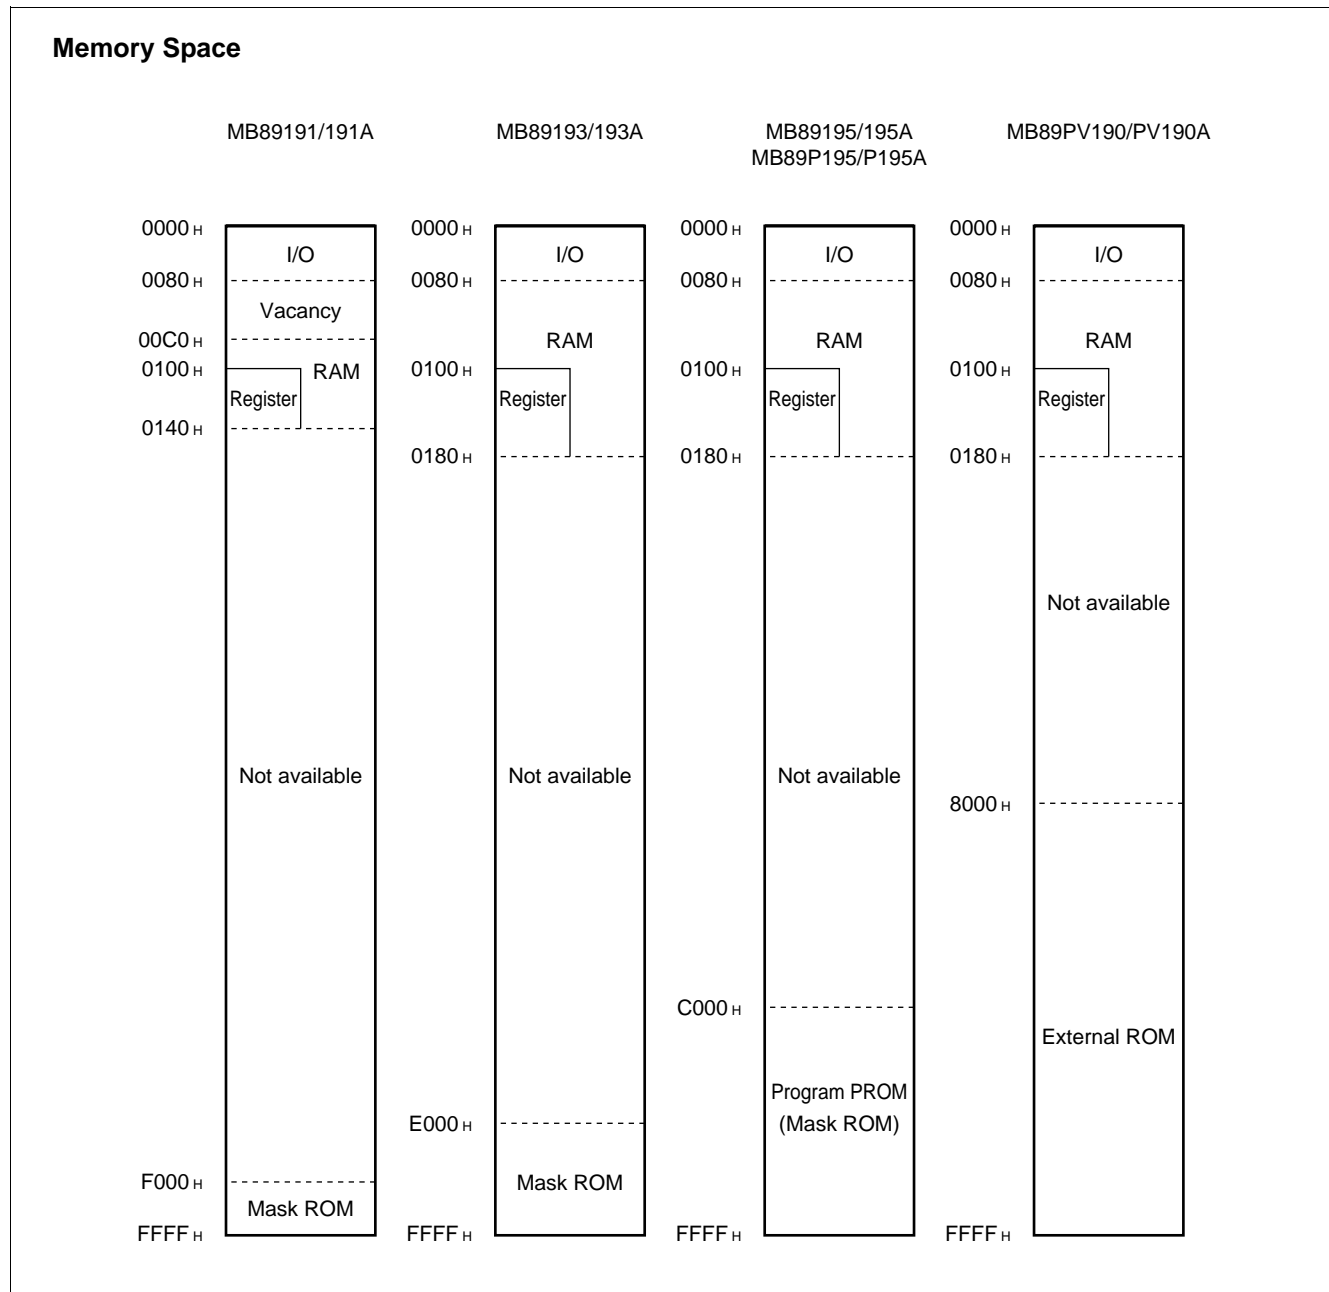

# MB89190/190A Series

## ■ CPU CORE

### 1. Memory Space

The microcontrollers of MB89190/190A series offer a 64 Kbytes of memory for storing all of I/O, data, and program areas. The I/O area is allocated from the lowest address. The data area is allocated immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is allocated from exactly the opposite end of I/O area, that is, the highest address. The tables of interrupt reset vectors, and vector call instructions are allocated from the highest address within the program area. The memory space of the MB89190/190A series is structured below:

# MB89190/190A Series

## 2. Registers

The F<sup>2</sup>MC-8L family has two types of registers; dedicated hardware registers and general-purpose memory registers. The following dedicated registers are provided:

Program counter (PC):	A 16-bit-long register for indicating the instruction storage positions
Accumulator (A):	A 16-bit-long temporary register for arithmetic operations, etc. When the instruction is an 8-bit data processing instruction, the lower byte is used.
Temporary accumulator (T):	A 16-bit-long register which is used for arithmetic operations with the accumulator. When the instruction is an 8-bit data processing instruction, the lower byte is used.
Index register (IX):	A 16-bit-long register for index modification
Extra pointer (EP) :	A 16-bit-long pointer for indicating a memory address
Stack pointer (SP) :	A 16-bit-long pointer for indicating a stack area
Program status (PS) :	A 16-bit-long register for storing a register pointer, a condition code

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR) (see the diagram below).

### Structure of the Program Status Register

# MB89190/190A Series

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

## Rule for Conversion of Actual Addresses of the General-purpose Register Area

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data, and bits for control of CPU operations at the time of an interrupt.

**H-flag:** Set to '1' when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared to '0' otherwise. This flag is for decimal adjustment instructions.

**I-flag:** Interrupt is enabled when this flag is set to '1'. Interrupt is disabled when the flag is cleared to '0'. Cleared to '0' at the reset.

**IL1, 0:** Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

IL1	ILO	Interrupt level	High-low
0	0	1	High
0	1		↑
1	0	2	↓
1	1	3	

**N-flag:** Set to '1' if the MSB becomes '1' as the result of an arithmetic operation. Cleared to '0' otherwise.

**Z-flag:** Set to '1' when an arithmetic operation results in 0. Cleared to '0' otherwise.

**V-flag:** Set to '1' if the complement on '2' overflows as a result of an arithmetic operation. Cleared to '0' if the overflow does not occur.

**C-flag:** Set to '1' when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared to '0' otherwise. Set to '1' the shift-out value in the case of a shift instruction.

# MB89190/190A Series

The following general-purpose registers are provided:

General-purpose registers: An 8-bit-long register for storing data

The general-purpose registers are of 8 bits and located in register banks of the memory. One bank contains eight registers and up to a total of 16 banks can be used on the MB89190/190A (8 banks on MB89191/191A). The bank currently in use is indicated by the register bank pointer. (RP)

Note: The number of register banks that can be used varies with the RAM size.

## Register Bank Configuraiton

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Rating

( $V_{SS} = V_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	$V_{CC}$	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	
	AVR	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	Must not exceed $V_{CC} + 0.3\text{ V}$ . MB89190A series only
EPROM program voltage	$V_{PP}$	$V_{SS} - 0.3$	$V_{SS} + 13.0$	V	MB89P195/P195A only
Input voltage	$V_I$	$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	
Output voltage	$V_O$	$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	
“L” level maximum output current	$I_{OL1}$	—	10	mA	Except P33 and P34 (Except P30 to P34 and P40 to P43 for MB89191AH/193AH)
	$I_{OL2}$	—	20	mA	P33, P34(P30 to P34 and P40 to P43 for MB89191AH/193AH)
“L” level average output current	$I_{OLAV1}$	—	4	mA	Except P33 and P34 (Except P30 to P34 and P40 to P43 for MB89191AH/193AH) Average value (operating current $\times$ operation rate)
	$I_{OLAV2}$	—	8	mA	P33 and P34(P30 to P34 and P40 to P43 for MB89191AH/193AH) Average value (operating current $\times$ operation rate)
“L” level total average output current	$\Sigma I_{OLAV}$	—	20	mA	Average value (operating current $\times$ operation rate)
“L” level total maximum output current	$\Sigma I_{OL}$	—	100	mA	
“H” level maximum output current	$I_{OH1}$	—	-10	mA	Except P33, P34, and P37
	$I_{OH2}$	—	-20	mA	P33, P34, P37
“H” level average output current	$I_{OHAV1}$	—	-2	mA	Except P33, P34, and P37 Average value (operating current $\times$ operation rate)
	$I_{OHAV2}$	—	-4	mA	Except P33, P34, and P37 Average value (operating current $\times$ operation rate)
“H” level total average output current	$\Sigma I_{OHAV}$	—	-10	mA	Average value (operating current $\times$ operation rate)
“H” level total maximum output current	$\Sigma I_{OH}$	—	-30	mA	
Power consumption	$P_D$	—	200	mW	
Operating temperature	$T_a$	-40	+85	°C	
Storage temperature	$T_{stg}$	-55	+150	°C	

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## 2. Recommended Operating Conditions

(V<sub>SS</sub> = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V <sub>CC</sub>	2.2*	6.0*	V	Normal operation assurance range* MB89191/191A/193/193A/195/195A
		2.7*	6.0*	V	Normal operation assurance range* MB89P195/P195A/PV190/PV190A
		1.5	6.0	V	Retains the RAM state in the stop mode
A/D converter reference input voltage	AVR	0.0	V <sub>CC</sub>	V	
Operating temperature	T <sub>A</sub>	-40	+85	°C	

\* : These values vary with the operation frequency and the assured analog operation range. See Figure 1 and “ 5. A/D Converter Electrical Characteristics.”

**Figure 1 Operating Voltage vs. Main Clock Operating Frequency**

Figure 1 indicates the operating frequency of the external oscillator at an instruction cycle of 4/F<sub>c</sub>.

# MB89190/190A Series

**WARNING:** Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

## 3. DC Characteristics

( $V_{CC} = +5.0\text{ V}$ ,  $V_{SS} = 0.0\text{ V}$ ,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ )

Parameter	Symbol	Pin	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
“H” level input voltage	$V_{IH}$	P00 to P07, P30 to P37, TEST	—	$0.7 V_{CC}$	—	$V_{CC} + 0.3$	V	
	$V_{IHS}$	$\overline{RST}$ , INT10 to INT12, EC, SCK, SI, INT20 to INT27	—	$0.8 V_{CC}$	—	$V_{CC} + 0.3$	V	
“L” level input voltage	$V_{IL}$	P00 to P03, P33 to P36, TEST	—	$V_{SS} - 0.3$	—	$0.3 V_{CC}$	V	
	$V_{ILS}$	$\overline{RST}$ , INT10 to INT12, EC, SCK, SI, INT 20 to INT27	—	$V_{SS} - 0.3$	—	$0.2 V_{CC}$	V	
Open-drain output pin applied voltage	$V_D$	P40 to P44	—	$V_{SS} - 0.3$	—	$V_{SS} + 0.3$	V	
“H” level output voltage	$V_{OH1}$	P00 to P07, P30 to P32, P35, P36	$I_{OH} = -2.0\text{ mA}$	2.4	—	—	V	
	$V_{OH2}$	P33, P34	$I_{OH} = -15\text{ mA}$	2.4	—	—	V	
	$V_{OH3}$	P37	$I_{OH} = -7.0\text{ mA}$	2.4	—	—	V	
“L” level output voltage	$V_{OL1}$	P00 to P07, P40 to P45, P30 to P32, P35 to P37	$I_{OL} = 1.8\text{ mA}$	—	—	0.4	V	Except MB89191AH/193AH
		P00 to P07, P35 to P37						MB89191AH/193AH
	$V_{OL2}$	$\overline{RST}$	$I_{OL} = 4.0\text{ mA}$	—	—	0.4	V

## 6. A/D Converter Glossary

- Resolution

Analog changes that are identifiable by the A/D converter.

When the number of bits is 8, analog voltage can be divided into  $2^8=256$ .

Linearity error (unit: LSB)

The deviation of the straight line connecting the zero transition point ("0000 0000" ↔ "0000 0001") with the full-scale transition point ("1111 1110" ↔ "1111 1111") from actual conversion characteristics.

Differential linearity error (unit: LSB)

The deviation of input voltage needed change the output code by 1 LSB from the theoretical value.

- Total error (unit: LSB)

The difference between theoretical and actual conversion values.

# MB89190/190A Series

## 7. Notes on Using A/D Converter

### • Input impedance of analog input pins

The A/D converter used for the MB89190A series contains a sample hold circuit as illustrated below to fetch analog input voltage into the sample hold capacitor for eight instruction cycles after starting A/D conversion.

For this reason, if the output impedance of the external circuit for the analog input is high, analog input voltage might not stabilize within the analog input sampling period. Therefore, it is recommended to keep the output impedance of the external circuit low (below 10 kΩ).

Note that if the impedance cannot be kept low, it is recommended to connect an external capacitor of approx. 0.1 μF for the analog input pin.

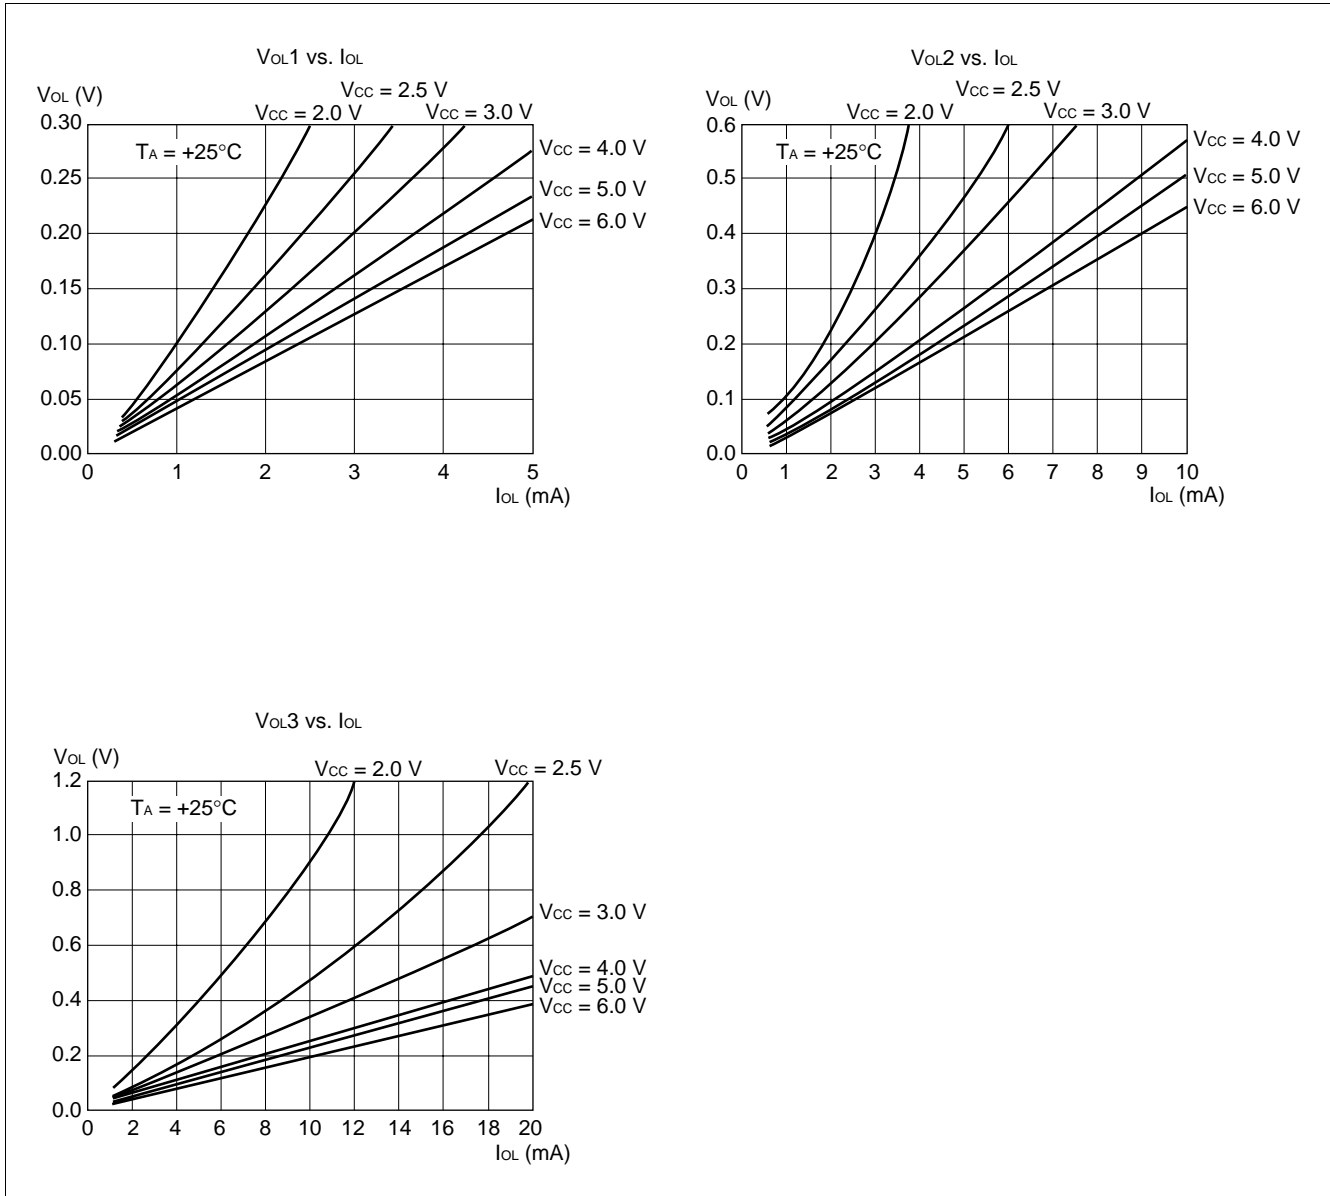

### • Error

The smaller the  $|\text{AVR} - \text{AV}_{\text{SS}}|$ , the greater the error would become relatively.

## ■ INSTRUCTIONS (136 INSTRUCTIONS)

Execution instructions can be divided into the following four groups:

- Transfer
- Arithmetic operation
- Branch
- Others

Table 1 lists symbols used for notation of instructions.

**Table 1 Instruction Symbols**

Symbol	Meaning
dir	Direct address (8 bits)
off	Offset (8 bits)
ext	Extended address (16 bits)
#vct	Vector table number (3 bits)
#d8	Immediate data (8 bits)
#d16	Immediate data (16 bits)
dir: b	Bit direct address (8:3 bits)
rel	Branch relative address (8 bits)
@	Register indirect (Example: @A, @IX, @EP)
A	Accumulator A (Whether its length is 8 or 16 bits is determined by the instruction in use.)
AH	Upper 8 bits of accumulator A (8 bits)
AL	Lower 8 bits of accumulator A (8 bits)
T	Temporary accumulator T (Whether its length is 8 or 16 bits is determined by the instruction in use.)
TH	Upper 8 bits of temporary accumulator T (8 bits)
TL	Lower 8 bits of temporary accumulator T (8 bits)
IX	Index register IX (16 bits)
EP	Extra pointer EP (16 bits)
PC	Program counter PC (16 bits)
SP	Stack pointer SP (16 bits)
PS	Program status PS (16 bits)
dr	Accumulator A or index register IX (16 bits)
CCR	Condition code register CCR (8 bits)
RP	Register bank pointer RP (5 bits)
Ri	General-purpose register Ri (8 bits, i = 0 to 7)
×	Indicates that the very × is the immediate data. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
(×)	Indicates that the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
((×))	The address indicated by the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)

# MB89190/190A Series

Columns indicate the following:

Mnemonic:	Assembler notation of an instruction
~:	The number of instructions
#:	The number of bytes
Operation:	Operation of an instruction
TL, TH, AH:	<p>A content change when each of the TL, TH, and AH instructions is executed. Symbols in the column indicate the following:</p> <ul style="list-style-type: none"><li>• “-” indicates no change.</li><li>• dH is the 8 upper bits of operation description data.</li><li>• AL and AH must become the contents of AL and AH prior to the instruction executed.</li><li>• 00 becomes 00.</li></ul>
N, Z, V, C:	An instruction of which the corresponding flag will change. If + is written in this column, the relevant instruction will change its corresponding flag.
OP code:	<p>Code of an instruction. If an instruction is more than one code, it is written according to the following rule:</p> <p>Example: 48 to 4F ← This indicates 48, 49, ... 4F.</p>

		P00 to P03 P40 to P45	Selectable by pin	Not available	None	Selectable by pin	Not available	None	Not available
2	Power-on reset <ul style="list-style-type: none"> <li>Power-on reset provided</li> <li>No power-on reset</li> </ul>		Selectable		Provided	Provided		Provided	Provided
3	Selection of oscillation stabilization wait time (at 4.2 MHz) <sup>*1</sup> <ul style="list-style-type: none"> <li>2<sup>18</sup>/F<sub>c</sub> (approx. 62.4 ms)</li> <li>2<sup>16</sup>/F<sub>c</sub> (approx. 15.6 ms)</li> <li>2<sup>12</sup>/F<sub>c</sub> (approx. 0.98 ms)</li> <li>2<sup>2</sup>/F<sub>c</sub> (approx. 0 ms)</li> </ul>		Selectable		Fixed to 2 <sup>16</sup> /F <sub>c</sub>	Selectable		Fixed to 2 <sup>16</sup> /F <sub>c</sub>	Fixed to 2 <sup>16</sup> /F <sub>c</sub>
4	Reset pin output <ul style="list-style-type: none"> <li>Reset output provided</li> <li>No reset output</li> </ul>		Selectable		Provided	Selectable		Provided	Provided
5	Oscillation type of clock <ul style="list-style-type: none"> <li>1 Crystal and ceramic oscillators</li> <li>2 CR</li> </ul>		Selectable		"1" only	Selectable		"1" only	"1" only

\*1: The oscillation stabilization time is generated by dividing the original clock oscillation. The time described in this item should be used as a rough guideline since the oscillation cycle is unstable immediately after oscillation starts. "F<sub>c</sub>" indicates the original oscillation frequency.

\*2: -101 and -201 are provided respectively for the MB89P195 and MB89P195A OTP versions as the standard products.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

### CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
