

**DUAL LOW DROP HIGH POWER  
OPERATIONAL AMPLIFIER**

ADVANCE DATA

- HIGH OUTPUT CURRENT
- VERY LOW SATURATION VOLTAGE
- LOW VOLTAGE OPERATION
- LOW INPUT OFFSET VOLTAGE
- GND COMPATIBLE INPUTS
- ST-BY FUNCTION (LOW CONSUMPTION)
- HIGH APPLICATION FLEXIBILITY

**PROTECTIONS:**

- VERY INDUCTIVE LOADS
- OVERRATING CHIP TEMPERATURE
- LOAD DUMP VOLTAGE
- FORTUITOUS OPEN GROUND
- ESD

**DESCRIPTION**

The L2750 is a new technology class AB dual power operational amplifier assembled in Multiwatt 11 package.

Thanks to the fully complementary PNP/NPN output configuration the L2750 can deliver a rail-to-

rail output voltage swing even at the highest current.

Additional feature is the very low current Stand-By function.

The high application flexibility of the L2750 makes the device suitable for either motor driving/control and audio applications purposes.

| $G_V$      | Open Loop Voltage Gain        | f = 1KHz                                    |      | 85          |            | dB               |
| $R_{IN}$   | Input Resistance              |   |      | 150         |            | M $\Omega$       |
| $E_{IN}$   | Input Noise Voltage           | $R_s = 0$ to 10K $\Omega$ f = 22Hz to 22KHz |      | 3           |            | $\mu\text{V}$    |
| CMRR       | Common Mode Rejection Ratio   |   | 75   | 90          |            | dB               |

**ELECTRICAL CHARACTERISTICS** (continued)

| Symbol | Parameter                | Test Condition                     | Min. | Typ. | Max. | Unit |
|--------|--------------------------|------------------------------------|------|------|------|------|
| SVR    | Supply Voltage Rejection | $R_s = 0$<br>$f = 100\text{Hz}$    | 75   | 90   |      | dB   |
| $C_T$  | Crosstalk                | $f = 1\text{KHz to } 10\text{KHz}$ |      | 80   |      | dB   |

**APPLICATION SUGGESTION**

The high flexibility makes the L2750 suitable for a wide range of applications.

**Motor Controller**

The device can be utilized as a motor controller. Fig.1 represents a bidirectional DC motor control suitable for logic driving. In these kinds of application it is possible to take advantage of the high current capability of the L2750 for driving several types of low impedance motors in a broad range of applications. Moreover the low drop allows high start up currents even at lowest supply voltage.

**Audio Applications**

Another typical utilization of the L2750 concerns the audio field, as follows:

- 1) DRIVER FOR BOOSTER : The remarkably low distortion and noise makes the device proper to be used as high quality driver for main amplifiers (i.e. car radio boosters). An example is shown by Fig. 5, where the gain is set to 24 dB (see also the relevant characteristics).
- 2) CAR RADIO BOOSTER WITH DIFFERENTIAL INPUT : Fig. 10 shows an example of car radio booster, with a gain of 30 dB, that is specially recommended for active loudspeakers. Among its main feature is the differential input and subsequent high noise suppression. The typical output power delivered into a 4Ω load is 24W ( $V_s = 14.4\text{V}$ ;  $d = 10\%$ ), as shown by the characteristics enclosed.
