TC9158P, TC9159P RECEIVING FREQUENCY DYNAMIC DRIVER.

The TC9158P/TC9159P is a receiving frequency display driver developed for the DTS-6/8. This driver latches serial data transferred from a system controller LSI, performs the correcting operation of intermediate frequency, and displays data. No external transistor is required as an output driver is built in.

- Optimum to the DTS-6/8.
- Dynamic type display simplifies wiring.
- The TC9158P has built-in high-breakdown voltage transistors and is capable of directly driving FL (Fluorescent Lamp).
- The TC9159P has built-in high current transistors and is capable of directly driving LED.
- Number of display digits is $4\frac{1}{2}$ digit up to 19995 and mark display (FM, MW, LW) is possible.
- Serial type data transferred with a system controller LSI minimizes connection to 3 wires.
- Can be used as a display driver of microcomputers.

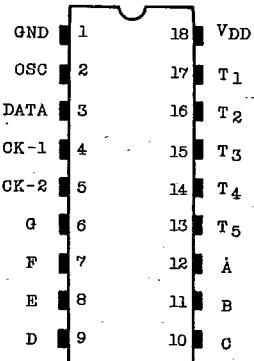

MAXIMUM RATINGS (Ta=25°C)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Power Supply Voltage	VDD	7	V
Input Voltage	VIN	-0.3 ~ VDD+0.3	V
Output Voltage (Note 1)	VOL	VDD-35	V
Output Current (Note 2)	IOH	50	mA
Power Dissipation	PD	350	mW
Operating Temperature	Topr	-30 ~ 75	°C
Storage Temperature	Tstg	-55 ~ 125	°C

Note 1. TC9158P is only guaranteed.
2. TC9159P is only guaranteed.

BLOCK DIAGRAM

FUNCTIONAL DESCRIPTION OF EACH PIN

PIN No.	SYMBOL	FUNCTIONAL DESCRIPTION	REMARKS
2	OSC	For digit signal generation Pin type input pin for oscillation circuit	
3	DATA	Input pin for receiving frequency data	C-MOS Input
4, 5	CK-1 CK-2	Input pins for receiving frequency data input control timing input	
6~12	A~G	Segment drive output pin	Built in TC9158P high breakdown voltage transistor.
13~17	T ₁ ~T ₅	Digit drive output pin	Built in TC9159P high current transistor.
1, 18	V _{DD} GND	Power supply pin

DESCRIPTION OF OPERATION

- When receiving frequency is updated a system controller LSI, the following timing signal and serial data signal are transferred for only one cycle.

1.1 Data Signal (DATA)

Data signal consists of 17 bits of which 12 bits are allocated to frequency data 5 bits to receiving band (LW/FMJ/FMU/AM9/AM10) signal.

1.2 Timing Signals (CK-1, CK-2)

Data signal is read at the following timings:
