### Product Description

PCS3P6200A is a versatile spread spectrum modulator designed specifically for a wide range of clock frequencies. The device addresses the need of a low EMI clock generator for use in display systems covering wide choice of pixel frequencies.

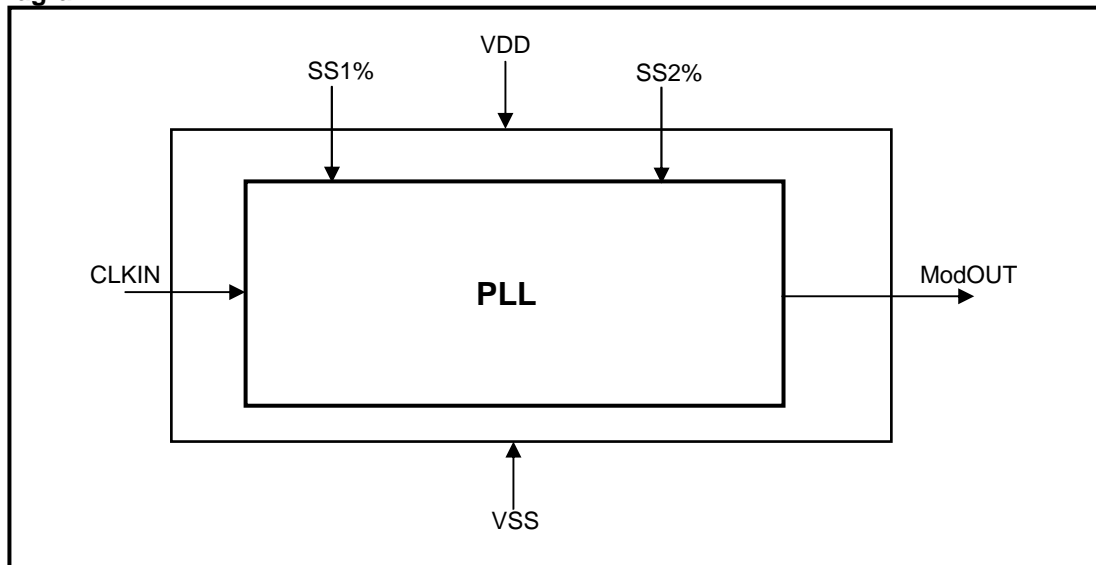

PCS3P6200A reduces electromagnetic interference (EMI) at the clock source, allowing system wide reduction of EMI of all clock dependent signals. PCS3P6200A allows significant system cost savings by reducing the number of circuit board layers, ferrite beads, shielding that are traditionally required to pass EMI regulations.

The Supply Voltage of the Device is 3.3V/2.5V. It has two Spread Selection Pins, SS1% and SS2% to select among the four possible deviation options. The Frequency Deviation across the Frequency range remains within  $\pm 10\%$  of the selected deviation. Refer to *the Frequency Deviation Selection Table for details*. The Device is available in a 6L-TSOT23 Package.

### Application

PCS3P6200A is targeted for use in a broad range of applications including Liquid Crystal and Plasma Displays.
