### Notes:

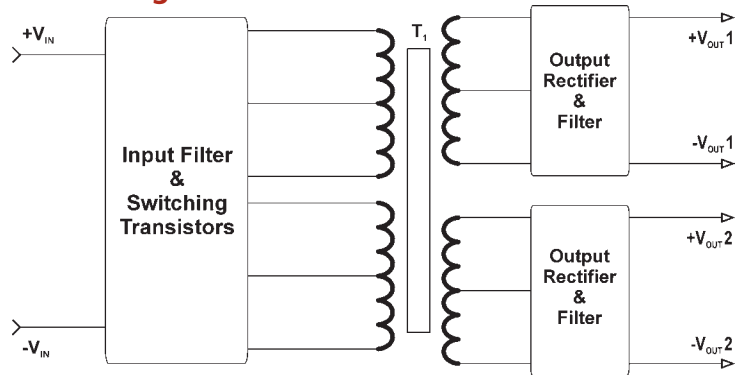

- Output load regulation is specified for a load change of 10% to 100%.
- When measuring output ripple, it is recommended that an external ceramic capacitor (approx approx 1  $\mu$ F to 10  $\mu$ F) be placed from each output to common.
- These units should not be operated with a load under 10% of full load. Operation at no-load may cause damage to the unit.
- These converters are specified for operation without external components. However, in some applications the addition of input/output capacitors will enhance stability and reduce output ripple. Recommended capacitor values are:

Vin	Input Capacitor	Vout	Output Capacitor
5 VDC	4.7 $\mu$ F	5 VDC	4.7 $\mu$ F
12 VDC	2.2 $\mu$ F	9 VDC	2.2 $\mu$ F
24 VDC	1.0 $\mu$ F	12 VDC	1.0 $\mu$ F
		15 VDC	0.47 $\mu$ F

For applications requiring very low output noise levels, a simple LC filter should be effective.

- It is recommended that a fuse be used on the input of a power supply for protection. See the Model Selection table above for the correct rating.
