PRODUCT OVERVIEW

SAM8 PRODUCT FAMILY

Samsung's SAM8 family of 8-bit single-chip CMOS microcontrollers offers a fast and efficient CPU with a wide range of integrated peripherals, in various mask-programmable ROM sizes. Analog its major CPU features are:

- Efficient register-oriented architecture
- Selectable CPU clock sources
- Idle and Stop power-down mode release by interrupt
- Built-in basic timer with watchdog function

The sophisticated interrupt structure recognizes up to eight interrupt levels. Each level can have one or more interrupt sources and vectors. Fast interrupt processing (within a minimum of six CPU clocks) can be assigned to specific interrupt levels.

KS88C6216/C6224/C6232/P6232 MICROCONTROLLERS

KS88C6216/C6224/C6232/P6232 single-chip 8-bit microcontrollers are based on the powerful SAM8 CPU architecture. The internal register file is logically expanded to increase the on-chip register space. KS88C6216/C6224/C6232/P6232 contain 16/32 K bytes of on-chip program ROM.

In line with Samsung's modular design approach, the following peripherals are integrated with the SAM8 core:

- Four programmable I/O ports (total 27 pins)
- One 8-bit basic timer for oscillation stabilization and watchdog functions
- One 8-bit general-purpose timer/counter with selectable clock sources
- One 12-bit counter with selectable clock sources, including Hsync or Csync input
- One interval timer
- PWM block with seven 8-bit PWM circuits
- Sync processor block (for Vsync and Hsync I/O, Csync input, and Clamp signal output)
- DDC and normal Multi-master IIC-bus
- 4-channel A/D converter (8-bit resolution)

KS88C6216/C6224/C6232/P6232 are a versatile microcontrollers which are ideal for use in multi-sync monitors or in general-purpose applications that require sophisticated timer/counter, PWM, sync signal processing, A/D converter, and multi-master IIC-bus support with DDC. They are available in a 42-pin SDIP or a 44-pin QFP package.

OTP

KS88C6216/C6224/C6232 microcontrollers are also available in OTP (One Time Programmable) version named, KS88P6232. KS88P6232 microcontroller has an on-chip 32-Kbyte one-time-programmable EPROM instead of masked ROM. KS88P6232 is comparable to KS88C6216/C6224/C6232, both in function and pin configuration except its ROM size.
