

LM307

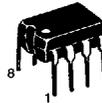

Internally Compensated Monolithic Operational Amplifier

A general purpose operational amplifier well suited for applications requiring lower input currents than are available with the popular MC1741. These improved input characteristics permit greater accuracy in sample and hold circuits and long interval integrators.

- Internally Compensated
- Low Offset Voltage: 7.5 mV Max
- Low Input Offset Current: 50 nA Max
- Low Input Bias Current: 250 nA Max

- NOTES:** 1. For supply voltages less than $\pm 15\text{ V}$, the absolute maximum input voltage is equal to the supply voltage.
2. For operating at elevated temperatures, the device must be derated based on a maximum junction temperature of 100°C .
3. Unless otherwise noted, these specifications apply for: $\pm 5.0\text{ V} \leq V_{CC}/V_{EE} \leq \pm 15\text{ V}$, $T_{low} = 0^\circ\text{C}$, $T_{high} = +70^\circ\text{C}$.
