## LV5680P — Monolithic Linear IC For Car Audio Systems Multi-Power Supply System IC

### Overview

The LV5680P is a multi-power supply system IC that provides four regulator outputs and two high side switches as well as a number of protection functions including overcurrent protection, overvoltage protection and overheat protection. It is an optimal power supply IC for car audio and car entertainment systems and similar products.

### Features

- Four regulator output systems
  - For microcontroller: 5.0V output voltage, 200mA maximum output current
  - For CD drive: 8.0V output voltage, 1300mA maximum output current
  - For illumination: 8 to 12V output voltage (output can be set with external resistors), 300mA maximum output current
  - For audio systems: 8 to 9V output voltage (output voltage can be set with external resistors), 300mA maximum output current
- Two  $V_{CC}$ -linked high side switch systems
  - EXT: 350mA maximum output current, 0.5V voltage difference between input and output.
  - ANT: 300mA maximum output current, 0.5V voltage difference between input and output.
- Two  $V_{DD}$  5V-linked high side switch systems
  - SW5V: 200mA maximum output current, 0.2V voltage difference between input and output.
  - ACC (accessory voltage detection output): 100mA maximum output current, 0.2V voltage difference between input and output.
- Overcurrent protection function
- Overvoltage protection function, typ 21V (excluding  $V_{DD}$  5V output)
- Overheat protection function, typ 175°C
- On-chip accessory voltage detection circuit
- P-channel LDMOS used for power output block

(Warning) The protector functions only improve the IC's tolerance and they do not guarantee the safety of the IC if used under the conditions out of safety range or ratings. Use of the IC such as use under over current protection range or thermal shutdown state may degrade the IC's reliability and eventually damage the IC.

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment. The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for new introduction or other application different from current conditions on the usage of automotive device, communication device, office equipment, industrial equipment etc. , please consult with us about usage condition (temperature, operation time etc.) prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.
- Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

## Specifications

### Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Conditions	Conditions	Ratings	Unit	
Supply voltage	$V_{CC}$ max		36	V	
Peak supply voltage	$V_{CC}$ peak	See below for the waveform applied.	50	V	
Allowable Power dissipation	$P_d$ max	Independent IC	$T_a \leq 25^\circ\text{C}$	1.5	W
		Al heat sink *		5.6	W
		With an infinity heat sink		32.5	W
Junction temperature	$T_j$ max		150	$^\circ\text{C}$	
Operating ambient temperature	$T_{opr}$		-40 to +85	$^\circ\text{C}$	
Storage temperature	$T_{stg}$		-55 to +150	$^\circ\text{C}$	

\* : When the Aluminum heat sink (50mm × 50mm × 1.5mm) is used

### Allowable Operating range at $T_a = 25^\circ\text{C}$

Parameter	Conditions	Ratings	Unit
Operating supply voltage 1	$V_{DD}$ output, SW output, ACC output	7.5 to 16	V
Operating supply voltage 2	ILM output at 10V	12 to 16	V
	ILM output at 8V	10 to 16	V
Operating supply voltage 3	Audio output at 9V	10 to 16	V
Operating supply voltage 4	CD output (CD output current = 1.3A)	10.5 to 16	V
	CD output (CD output current $\leq$ 1A)	10 to 16	V

### Electrical Characteristics at $V_{CC} = 14.4\text{V}$ , $T_a = 25^\circ\text{C}$ (\*6)

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Current drain	$I_{CC}$	$V_{DD}$ no load, CTRL1/2 = $\lceil L/L \rceil$ , ACC = 0V		400	800	$\mu\text{A}$
<b>CTRL1 Input</b>						
Low input voltage	$V_{IL1}$		0		0.5	V

ACC output voltage 1	$V_{O8}$	$I_{O8} = 0.5\text{mA}, I_{O1}, I_{O7} = 0\text{A} *5$	$V_{O1}-0.25$	$V_{O1}$		V
ACC output voltage 2	$V_{O8}'$	$I_{O8} = 100\text{mA}, I_{O1}, I_{O7} = 0\text{A} *5$	$V_{O1}-0.45$	$V_{O1}-0.2$		V
ACC output voltage	$I_{O8}$	$V_{O8} \geq 4.55$	100			mA

\*3 : When a component with a resistance accuracy of  $\pm 1\%$  is used

<Reference> When a component with a resistance accuracy of  $\pm 0.5\%$  is used,  $V_{O3}''$  is  $8.67\text{V} \leq 9.0\text{V} \leq 9.33\text{V}$ .

\*4 : When a component with a resistance accuracy of  $\pm 1\%$  is used

The absolute accuracy of the internal resistance is  $\pm 15\%$ .

\*5 : Since the SW 5V and ACC 5V are output from  $V_{DD} 5\text{V}$  through the SW, the voltage drops by an amount equivalent to the ON resistance of the SW.

\*6: The entire specification has been defined based on the tests performed under the conditions where  $T_j$  and  $T_a$  ( $=25^\circ\text{C}$ ) are almost equal. There tests were performed with pulse load to minimize the increase of junction temperature ( $T_j$ ).

## Recommended Operation Circuit

### Peripheral parts list

Name of part	Description	Recommended value	Remarks
C1	Power supply bypass capacitor	100 $\mu$ F or more	These capacitors must be placed near the V <sub>CC</sub> and GND pins.
C2	Oscillation prevention capacitor	0.22 $\mu$ F or more	
C3	EXT output stabilization capacitor	2.2 $\mu$ F or more	
C4	ANT output stabilization capacitor	2.2 $\mu$ F or more	
C6, C9, C11, C13	Output stabilization capacitor	4.7 $\mu$ F or more	Electrolytic capacitor *
C7, C10, C12, C14	Output stabilization capacitor	0.22 $\mu$ F or more	Ceramic capacitor *
R1	Resistor for ILM voltage adjustment	ILM output voltage R1:without = 12.0V :270k $\Omega$ = 10.0V :100k $\Omega$ = 8.0V	A resistor with resistance accuracy as low as less than $\pm 1\%$ must be used.
R2, R3	Resistor for AUDIO voltage setting	AUDIO output voltage R2/R3:30k $\Omega$ /5.6k $\Omega$ = 8.0V :27k $\Omega$ /4.7k $\Omega$ = 8.5V :24k $\Omega$ /3.9k $\Omega$ = 9.0V	A resistor with resistance accuracy as low as less than $\pm 1\%$ must be used.
D1, D2, D3, D4	Diode for internal device breakdown protection		

\* : In order to stabilize the regulator outputs, it is recommended that the electrolytic capacitor and ceramic capacitor be connected in parallel.

Furthermore, the values listed above do not guarantee stabilization during the overcurrent protection operations of the regulator, so oscillation may occur during an overcurrent protection operation.

## • ILM output voltage setting method

The ILM\_F voltage is determined by the internal band gap voltage of the IC (typ = 1.26V).

Formula for ILM voltage calculation

$$Z_1 = R_2 // R_3 = \frac{R_2 \cdot R_3}{R_2 + R_3}$$

$$ILM = \frac{1.26[V]}{R_1} \times Z_1 + 1.26[V]$$

$$Z_1 = \frac{(ILM - 1.26) \cdot R_1}{1.26} \quad R_3 = \frac{R_2 \cdot Z_1}{R_2 - Z_1}$$

Example : ILM = 9V setting method

$$Z_1 = \frac{(9V - 1.26V) \cdot 7k\Omega}{1.26V} \cong 43k\Omega$$

When R3 = 150k, the ILM output voltage will be as follows:

$$Z_1' = \frac{59.67k\Omega \cdot 150k\Omega}{59.67k\Omega + 150k\Omega} \cong 42.69k\Omega$$

$$ILM = \frac{1.26V}{7k\Omega} \times 42.69k\Omega + 1.26V \cong \boxed{8.94V}$$

## • AUDIO output voltage setting method

The AUDIO\_F voltage is determined by the internal band gap voltage of the IC (typ = 1.26V).

Formula for AUDIO voltage calculation

$$AUDIO = \frac{1.26[V]}{R_2} \times R_1 + 1.26[V]$$

$$\frac{R_1}{R_2} = \frac{(AUDIO - 1.26)}{1.26}$$

The circuit must be designed in such a way that the R1:R2 ratio satisfies the formula given above for the AUDIO voltage that has been set.

Example : AUDIO = 8.5V setting method

$$\frac{R_1}{R_2} = \frac{(8.5 - 1.26)}{1.26} \cong 5.75$$

$$\frac{R_1}{R_2} = \frac{27k\Omega}{4.7k\Omega} \cong 5.74$$

$$AUDIO = 1.26V \times 5.74 + 1.26V \cong \boxed{8.49V}$$

Note : In the above, the typical values are given in all instances for the values used and, as such, they will vary due to the effects of production-related variations of the IC and external resistors.

# LV5680P

## • CTRL1 Application Circuit Example

(1) 3.3V input:  $R1 = 4.7k\Omega$ ,  $R2 = 10k\Omega$

A	B	CTRL1
0V	0V	0V
0V	3.3V	1.05V
3.3V	0V	2.23V
3.3V	3.3V	3.20V

## • CTRL2 Application Circuit Example

(1) 3.3V input:  $R3 = R4 = 4.7k\Omega$

A	B	CTRL2
0V	0V	0V
0V	3.3V	1.61V
3.3V	0V	1.61V
3.3V	3.3V	3.29V

## HZIP15J Heat sink attachment

Heat sinks are used to lower the semiconductor device junction temperature by leading the heat generated by the device to the outer environment and dissipating that heat.

- a. Unless otherwise specified, for power ICs with tabs and power ICs with attached heat sinks, solder must not be applied to the heat sink or tabs.

b. Heat sink attachment

- Use flat-head screws to attach heat sinks.
- Use also washer to protect the package.
- Use tightening torques in the ranges 39-59Ncm(4-6kgcm) .
- If tapping screws are used, do not use screws with a diameter larger than the holes in the semiconductor device itself.
- Do not make gap, dust, or other contaminants to get between the semiconductor device and the tab or heat sink.
- Take care a position of via hole .
- Do not allow dirt, dust, or other contaminants to get between the semiconductor device and the tab or heat sink.
- Verify that there are no press burrs or screw-hole burrs on the heat sink.
- Warping in heat sinks and printed circuit boards must be no more than 0.05 mm between screw holes, for either concave or convex warping.
- Twisting must be limited to under 0.05 mm.
- Heat sink and semiconductor device are mounted in parallel.  
Take care of electric or compressed air drivers
- The speed of these torque wrenches should never exceed 700 rpm, and should typically be about 400 rpm.

c. Silicone grease

- Spread the silicone grease evenly when mounting heat sinks.
- Sanyo recommends YG-6260 (Momentive Performance Materials Japan LLC)

d. Mount

- First mount the heat sink on the semiconductor device, and then mount that assembly on the printed circuit board.
- When attaching a heat sink after mounting a semiconductor device into the printed circuit board, when tightening up a heat sink with the screw, the mechanical stress which is impossible to the semiconductor device and the pin doesn't hang.

e. When mounting the semiconductor device to the heat sink using jigs, etc.,

- Take care not to allow the device to ride onto the jig or positioning dowel.
- Design the jig so that no unreasonable mechanical stress is not applied to the semiconductor device.

f. Heat sink screw holes

- Be sure that chamfering and shear drop of heat sinks must not be larger than the diameter of screw head used.
- When using nuts, do not make the heat sink hole diameters larger than the diameter of the head of the screws used. A hole diameter about 15% larger than the diameter of the screw is desirable.
- When tap screws are used, be sure that the diameter of the holes in the heat sink are not too small. A diameter about 15% smaller than the diameter of the screw is desirable.

- g. There is a method to mount the semiconductor device to the heat sink by using a spring band. But this method is not recommended because of possible displacement due to fluctuation of the spring force with time or vibration.

### Caution for implementing LV5680P to a system board

The package of LV5680P is HZIP15J which has some metal exposures other than connection pins and heatsink as shown in the diagram below. The electrical potentials of (2) and (3) are the same as those of pin 15 and pin 1, respectively. (2) (=pin 15) is the  $V_{CC}$  pin and (3) (=pin 1) is the ILM (regulator) output pin. When you implement the IC to the set board, make sure that the bolts and the heatsink are out of touch from (2) and (3). If the metal exposures touch the bolts which has the same electrical potential with GND, GND short occurs in ILM output and  $V_{CC}$ . The exposures of (1) are connected to heatsink which has the same electrical potential with substrate of the IC chip (GND). Therefore, (1) and GND electrical potential of the set board can connect each other.
