Description

The IXDD630/IXDI630/IXDN630 high-speed gate drivers are especially well suited for driving the latest IXYS power MOSFETs and IGBTs. The IXD_630 output can source and sink 30A of peak current while producing voltage rise and fall times of less than 20ns. Internal circuitry eliminates cross conduction and current "shoot-through," and the driver is virtually immune to latch up. Under-voltage lockout (UVLO) circuitry holds the output LOW until sufficient supply voltage is applied (12.5V for the IXD_630 versions, and 9V for the IXD_630M versions). Low propagation delays and fast, matched rise and fall times make the IXD_630 family ideal for very high frequency and high-power applications.

The IXDD630 is configured as a non-inverting driver with an enable. The IXDN630 is configured as a non-inverting driver, and the IXDI630 is configured as an inverting driver.

The IXD_630 family is available in a 5-pin TO-220 (CI), and a 5-pin TO-263 (YI) package.

4 Manufacturing Information

4.1 Moisture Sensitivity

All plastic encapsulated semiconductor packages are susceptible to moisture ingress. Clare classified all of its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, **IPC/JEDEC J-STD-020**, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a **Moisture Sensitivity Level (MSL) rating** as shown below, and should be handled according to the requirements of the latest version of the joint industry standard **IPC/JEDEC J-STD-033**.

Device	Moisture Sensitivity Level (MSL) Rating
IXD_630YI / IXD_630MYI / IXD_630CI / IXD_630MCI	MSL1

4.2 ESD Sensitivity

This product is **ESD Sensitive**, and should be handled according to the industry standard **JESD-625**.

4.3 Reflow Profile

This product has a maximum body temperature and time rating as shown below. All other guidelines of **J-STD-020** must be observed.

Device	Maximum Temperature x Time
IXD_630YI / IXD_630MYI / IXD_630CI / IXD_630MCI	245°C for 30 seconds

4.4 Board Wash

Clare recommends the use of no-clean flux formulations. However, board washing to remove flux residue is acceptable, and the use of a short drying bake may be necessary. Chlorine-based or Fluorine-based solvents or fluxes should not be used. Cleaning methods that employ ultrasonic energy should not be used.
