■ PIN CONFIGURATION

■ PIN DESCRIPTION

PIN NAME	DESCRIPTION
V_{IN}	Power Input Voltage. Supply voltage can range from 2.25V to 6V. Bypass with a 68 μ F capacitor to GND.
GND	Ground
$\overline{\text{SHDN}}$	Active-Low Shutdown Input. A logic low at $\overline{\text{SHDN}}$ reduces supply current to 0.01 μ A. In shutdown, the POK output is low. Connect $\overline{\text{SHDN}}$ to V_{IN} for normal operation.
V_{OUT}	Output Voltage
ADJ	Voltage-adjust Input. Connect ADJ to GND for preset output. Connect an external resistive voltage-divider from V_{OUT} to ADJ to set the output voltage between 0.8V and 6V. The ADJ regulation voltage is 800mV or 1.216V.
SENSE	Remote sense pin.
SS	Soft start time setting. For adjustable soft start time version, connect a capacitor from SS to gnd to set the soft start time.
POK	Open-Drain, Active-Low Power-OK Output. POK remains low while the output voltage (V_{OUT}) is below the POK threshold.

Note 1: Dropout voltage is defined as the voltage from the input to output when output is 2% below the nominal value. Dropout voltage specification applies only to output voltages of 2.5V and above.

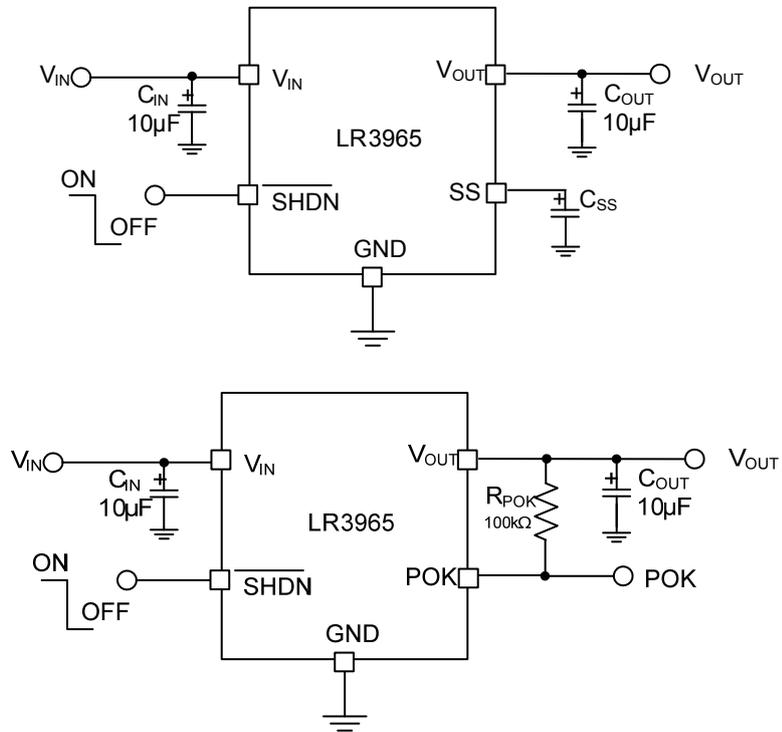

2: Output voltage line regulation is defined as the change in output voltage from the nominal value resulting from a change in the input line voltage. Output voltage load regulation is defined as the change in output voltage from the nominal value as the load current increases from no load to full load.

3: Regulation is measured at constant junction temperature by using a 20ms current pulse. Devices are tested for load regulation in the load range from 10mA to 1.5A
