

**Small Signal Diode**

**Features**

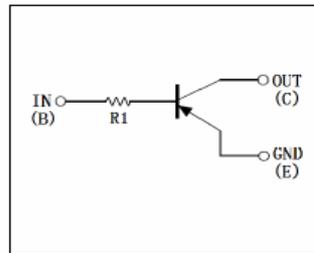

- ✧ Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistor (see equivalent circuit).
- ✧ The bias resistors consist of thin-film resistors with complete isolation to allow negative biasing of the input. They also have the advantage of almost completely eliminating parasitic effects.
- ✧ Only the on/off conditions need to be set for operation, marking device design easy.
- ✧ Green compound (Halogen free) with suffix "G" on packing code and prefix "G" on date code.
