1. FUNCTIONS & FEATURES

1.1. Format : 122x32dots

1.2. LCD mode : STN / Positive transflective mode / Yellow-green

1.3. Viewing direction : 6 o'clock

1.4. Driving scheme : 1/32 Duty cycle, 1/5 Bias

1.5. Power supply voltage(V_{DD}) : 5.0V

1.6. LCD driving voltage : 4.5V (reference voltage)

 1.7. Operation temp
 : -20~70 °C

 1.8. Storage temp
 : -30~80 °C

 1.9. Backlight color
 : Yellow-green

1.10. RoHS compliant.

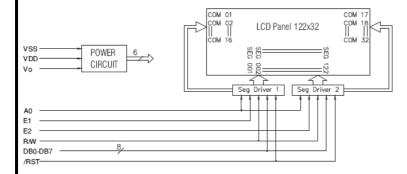

2. MECHANICAL SPECIFICATIONS

2.1. Module size :80.0mm(L)*36.0mm(W)*13.5MAX mm(H)

2.2. Viewing area : 60.5mm(L)*18.5mm(W)
2.3. Dot pitch : 0.44mm(L)*0.49mm(W)
2.4. Dot size : 0.40mm(L)*0.45mm(W)

2.5. Weight : Approx.

5. PIN DESCRIPTION

No.	Symbol	Function
1	VSS	GND
2	VDD	Power supply
3	VO	Supply voltage for LCD drive
4	A0	Register selection. (H: Data register L: Instruction register)
5	E1	Enable signal for IC1(left half of the panel)
6	E2	Enable signal for IC2(right half of the panel)
7	R/W	Read /write selection. (H: Read L: write)
8~15	DB0~DB7	Data bus lines
16	/RST	Reset signal (The rise of the signal is for active and keep RET='h')
17	LEDA	Power supply for backlight(+)
18	LEDK	Power supply for backlight(-)

<u>6. MAXIMUM ABSOLUTE LIMI</u>T

(For IC)

Parameter	Symbol	Condition	Unit
Supply voltage (1)	Vss	− 8.0 ~ +0.3	V
Supply voltage (2)	V5	−16.5 ~ +0.3	V
Supply voltage (3)	V1, V4, V2, V3	V5 ~ +0.3	V
Input voltage	VIN	Vss - 0.3 ~ +0.3	V
Output voltage	V0	Vss - 0.3 ~ +0.3	V
Allowable loss	PD	250	mW
Operating temperature	Topr	−30 ~ +85	°C
Storage temperature	Tstg	− 65 ~ +150	°C
Soldering temperature/time	Tsolder	260 / 10 (at lead)	°C / Sec

Notes:

- 1. All voltages are based on VDD = 0V.
- 3. The LSI may be permanently damaged if used with any value in excess of the absolute maximum ratings. During normal operation, the LSI should preferably be used within the specified electrical characteristics. Failure to meet them can cause the LSI to malfunction or lose its reliability.
- 4. Generally, flat package LSIs may have moisture resistance lowered when solder dipped. In mounting LSIs on a board, it is recommended to use a method which is least unlikely to give thermal stress on the package resin.

Reset time		tr			1.0	_	1000	μs	RES

Notes:

- Operation over a wide range of voltages is guaranteed, except where a sudden voltage change occurs during access.
- *2. Pins A0, D0 D7, E (RD), R/W (WR) and CS
- *3. Pins CL, FR, M/S and RES
- *4. Pins D0 D7
- *5. Pin FR
- *6. Pins A0, E (RD), R/W (WR), CS, CL and RES
- Applicable when pins D0 D7 and FR are at high impedance.
- *8. This value is current consumption when a vertical stripe pattern is written at tcyc. Current consumption during

- access is nearly proportionate to access frequency (tcvc).
 Only Top (1) is consumed while no access is made.
- *9. Relationship between the oscillation frequency, frame and Rr (see Figures 5.1 – 5.3).
- *10. Operating voltage ranges of Vss and V5 (see Figure 5.4).
- *11. Resistance with a voltage of 0.1V applied between the output pin (SEG, COM) and each power pin (V1, V2, V3, V4). It is specified within the operating voltage range.
- *12, 13, 14. Current consumed by each discrete IC, not including LCD panel and wiring capacitances.
- *12. Applicable to SED1520FAA and SED1521FAA
- *13. Applicable to SED1520Foa
- *14. Applicable to SED1521Foa

9. CONTROL AND DISPLAY INSTRUCTION

	Command	Code											Function	
	Command	Α0	RD	WR	D7	D6	D5	D4	D3	D2	D1	D0	Function	
(1)	Display ON/OFF	0	1	0	1	0	1	0	1	1	1	0/1	Turns all display on or off, independently of display RAM data or internal status.	
													ON OFF (Power-saving mode with static drive on)*	
(2)	Display Start Line	0	1	0	1	1	0	А	Disp ddre	olay S ss (C		1)	Specifies RAM line corresponding to uppermost line (COM0) of display.	
(3)	Set Page Address	0	1	0	1	0	1	1	1	0	Page	(0-3)	Sets display RAM page in page address register.	
(4)	Set Column (Segment) Address	0	1	0	0	(Colur	mn A	ddre	ess (()–79)	Sets display RAM column address in column address register.	
(5)	Read Status	0	0	1	Busy	ADC	ON/OFF	RESET	0	0	0	0	Reads the following status: BUSY 1: Internal operation 0: Ready ADC 1: CW output (forward) 0: CCW output (reverse)	
													ON/OFF 1: Display off O: Display on RESET 1: Being reset O: Normal	
(6)	Write Display Data	1	1	0			١	Vrite	Data	a			Writes data from data Display RAM location whose address has been	
(7)	Read Display Data	1	0	1			F	Read	Dat	a			Reads data from display RAM onto data bus. preset is accessed. After access, the column address is incremented by 1.	
(8)	Select ADC	0	1	0	1	0	1	0	0	0	0	0/1	Used to invert relationship of assignment between display RAM column addresses and segment driver outputs. 0: CW output (forward) 1: CCW output (reverse)	
(9)	Static Drive ON/OFF	0	1	0	1	0	1	0	0	1	0	0/1	Selects normal display or static driving operation.	
													Static drive (power-saving mode) Normal driving	
(10)	Select Duty	0	1	0	1	0	1	0	1	0	0	0/1	Selects LCD cell driving duty	
	-												1: 1/32 0: 1/16	
(11)	Read Modify Write	0	1	0	1	1	1	0	0	0	0	0	Increments column address counter by 1 when display data is written. (This is not done when data is read.)	
(12)	End	0	1	0	1	1	1	0	1	1	1	0	Clears read modify write mode.	
(13)	Reset	0	1	0	1	1	1	0	0	0	1	0	Sets display start line register on the first line. Also sets column address counter and page address counter to 0.	

^{*} With display off (command (1)), static drive going on (9) invokes power-saving mode.

PG12232G-O series	SPEC ONLY	11

12.QUALITY SPECIFICATIONS

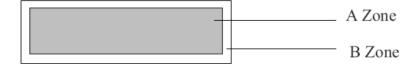

12.1 Standard of the product appearance test

Manner of appearance test: The inspection should be performed in using 20W x 2 fluorescent lamps. Distance between LCM and fluorescent lamps should be 100 cm or more. Distance between LCM and inspector eyes should be 30 cm or more.

Viewing direction for inspection is 45° from vertical against LCM.

Definition of zone:

A Zone: Active display area (minimum viewing area). B Zone: Non-active display area (outside viewing area).

12.2 Specification of quality assurance

AQL inspection standard

Sampling method: MIL-STD-105E, Level II, single sampling

MODEL NO. PAGE		PAGE

14	Total no. of acceptable Defect	A. Zone Maximum 2 minor non-conformities per one unit. Defect distance: each point to be separated over 10mm B. Zone It is acceptable when it is no trouble for quality and assembly in customer's end product.	

MODEL	PAGE	
PG12232G-O series	SPEC ONLY	17

12.3 Reliability of LCM

Reliability test condition:

Item	Condition	Time (hrs)	Assessment
High temp. Storage	80°C	48	
High temp. Operating	70°C	48	
Low temp. Storage	-30°C	48	No abnormalities
Low temp. Operating	-20°C	48	in functions
Humidity	40°C/ 90%RH	48	and appearance
Temp. Cycle	$0^{\circ}\text{C} \leftarrow 25^{\circ}\text{C} \rightarrow 50^{\circ}\text{C}$	10cycles	
	$(30 \min \leftarrow 5 \min \rightarrow 30 \min)$		

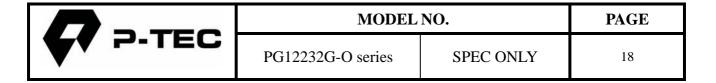

Recovery time should be 24 hours minimum. Moreover, functions, performance and appearance shall be free from remarkable deterioration within 50,000 hours under ordinary operating and storage conditions room temperature ($20\pm8^{\circ}$ C), normal humidity (below 65% RH), and in the area not exposed to direct sun light.

12.4 Precaution for using LCD/LCM

LCD/LCM is assembled and adjusted with a high degree of precision. Do not attempt to make any alteration or modification. The followings should be noted.

General Precautions:

- 1. LCD panel is made of glass. Avoid excessive mechanical shock or applying strong pressure onto the surface of display area.
- 2. The polarizer used on the display surface is easily scratched and damaged. Extreme care should be taken when handling. To clean dust or dirt off the display surface, wipe gently with cotton, or other soft material soaked with isoproply alcohol, ethyl alcohol or trichlorotriflorothane, do not use water, ketone or aromatics and never scrub hard.
- 3. Do not tamper in any way with the tabs on the metal frame.
- 4. Do not make any modification on the PCB without consulting P-tec Opto.
- 5. When mounting a LCM, make sure that the PCB is not under any stress such as bending or twisting. Elastomer contacts are very delicate and missing pixels could result from slight dislocation of any of the elements.

- 6. Avoid pressing on the metal bezel, otherwise the elastomer connector could be deformed and lose contact, resulting in missing pixels and also cause rainbow on the display.
- 7. Be careful not to touch or swallow liquid crystal that might leak from a damaged cell. Any liquid crystal adheres to skin or clothes, wash it off immediately with soap and water.

Static Electricity Precautions:

- 1. CMOS-LSI is used for the module circuit; therefore operators should be grounded whenever he/she comes into contact with the module.
- 2. Do not touch any of the conductive parts such as the LSI pads; the copper leads on the PCB and the interface terminals with any parts of the human body.
- 3. Do not touch the connection terminals of the display with bare hand; it will cause disconnection or defective insulation of terminals.
- 4. The modules should be kept in anti-static bags or other containers resistant to static for storage.
- 5. Only properly grounded soldering irons should be used.
- 6. If an electric screwdriver is used, it should be grounded and shielded to prevent sparks.
- 7. The normal static prevention measures should be observed for work clothes and working benches.
- 8. Since dry air is inductive to static, a relative humidity of 50-60% is recommended.

Soldering Precautions:

- 1. Soldering should be performed only on the I/O terminals.
- 2. Use soldering irons with proper grounding and no leakage.
- 3. Soldering temperature: 280°C+10°C
- 4. Soldering time: 3 to 4 second.
- 5. Use eutectic solder with resin flux filling.
- 6. If flux is used, the LCD surface should be protected to avoid spattering flux.
- 7. Flux residue should be removed.

Operation Precautions:

- 1. The viewing angle can be adjusted by varying the LCD driving voltage Vo.
- 2. Since applied DC voltage causes electro-chemical reactions, which deteriorate the display, the applied pulse waveform should be a symmetric waveform such that no DC component remains. Be sure to use the specified operating voltage.
- 3. Driving voltage should be kept within specified range; excess voltage will shorten display life.
- 4. Response time increases with decrease in temperature.
- 5. Display color may be affected at temperatures above its operational range.
- 6. Keep the temperature within the specified range usage and storage. Excessive temperature and humidity could cause polarization degradation, polarizer peel-off or generate bubbles.
- 7. For long-term storage over 40°C is required, the relative humidity should be kept below 60%,

MODEL	PAGE	
PG12232G-O series	SPEC ONLY	19

Limited Warranty

P-tec LCDs and modules are not consumer products, but may be incorporated by P-tec's customers into consumer products or components thereof, P-tec does not warrant that its LCDs and components are fit for any such particular purpose.

- The liability of P-tec is limited to repair or replacement on the terms set forth below. P-tec
 will not be responsible for any subsequent or consequential events or injury or damage to any personnel or user
 including third party personnel and/or user. Unless otherwise agreed in writing between P-tec and the customer,
 P-tec will only replace or repair any of its LCD which is found defective electrically or visually when
 inspected in accordance with P-tec general LCD inspection standard. (Copies available on request)
- 2. No warranty can be granted if any of the precautions state in handling liquid crystal display above has been disregarded. Broken glass, scratches on polarizer mechanical damages as well as defects that are caused accelerated environment tests are excluded from warranty.
- 3. In returning the LCD/LCM, they must be properly packaged; there should be detailed description of the failures or defect.
