

250mA Low Consumption Linear Regulator

DESCRIPTION

BL8061 series is a group of positive voltage output, low power consumption, low dropout voltage, three terminal regulator. It can provide 200mA output current when input / output voltage differential drops to 420mV ($V_{out}=3.3V$), And it also provides foldback short-circuit protection and output current limit function. The very low power consumption of BL8061 ($I_q=2.0\mu A$) can greatly improve natural life of batteries.

BL8061 can provide output value in the range of 1.1V~5.0V in 0.1V steps. It also can customized on command.

BL8061 includes high accuracy voltage reference, error amplifier, current limit circuit and output driver module.

BL8061 has well load transient response and good temperature characteristic, And it uses trimming technique to guarantee output voltage accuracy within $\pm 2\%$.

TYPICAL APPLICATION

NOTE: Input capacitor ($C_{in}=1\mu F$) and Output capacitor ($C_{out}=1\mu F$) are recommended in all application circuit. Ceramic capacitor is recommended.

EXPLANATION

BL8061 is a series of low dropout voltage and low power consumption three pins regulator. Its application circuit is very simple, which only needs two outside capacitors. It is composed of these modules: high accuracy voltage reference, current limit circuit, error amplifier, output driver and power transistor.

Current Limit module can keep chip and power system away from danger when load current is more than 250mA.

BL8061 uses trimming technique to assure the accuracy of output value within $\pm 2\%$, at the same time, temperature compensation is elaborately considered in this chip, which makes BL8061's temperature coefficient within $100\text{ppm}/^\circ\text{C}$.
