

### Features

- Tx Output Power: 28dBm
- Tx Gain: 42dB
- Integrated Single Port Rx/Tx 50Ω Bi-directional Transceiver Interface
- LNA with Bypass Mode

### Applications

- Wireless Automated Metering
- Wireless Alarm Systems
- Portable Battery Powered Equipment
- Smart Energy
- 868MHz/915MHz ISM Band Applications
- Single Chip RF Front End Module

Functional Block Diagram

### Product Description

The RF6559 front end module is intended for use in 915MHz AMR solutions. The RF6559 addresses the need for aggressive size reduction for a typical 915MHz AMR front end design and greatly reduces the number of components outside the RF6559 thus minimizing the footprint and assembly cost of the overall solution. The RF6559 contains an integrated three stage power amplifier which provides 42dB of Gain and typical Power output of 28dBm. The RF6559 allows for Tx/Rx on a single antenna via the 2 integrated SPDT switches. Tx filtering, built in power detector and a two stage LNA which provides a typical 32dB of gain round out the inside of this module. All the functionality of the RF6559 is packaged in a 28-pin, 6mm x 6mm laminate package with backside ground. Greatly minimizes next level board space and allows for simplified integration.

### Ordering Information

RF6559	ISM Band Transmit/Receive Module
RF6559SB	5-Piece Bag
RF6559SR	Standard 100-Piece Reel
RF6559TR13	Standard 2500-Piece reel
RF6559PCK-410	Fully Assembled Evaluation Board and 5-Piece Bag

**Caution!** ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

## Evaluation Board Schematic

**Package Drawing  
28-pin, 6mm x 6mm**

- Notes:
1. Shaded area represents Pin 1 location
  2. Defining I/O Pad Center:  
To define center of the I/O pad opening, draw a right triangle in one corner of the I/O pad  
Then take the center of the hypotenuse to determine center of I/O pad

A = 0.375 x 0.400 mm  
 B = 0.400 x 0.375 mm  
 C = 4.400 x 4.400 mm

## PCB Design Requirements

### PCB Surface Finish

The PCB surface finish used for RFMD's qualification process is electroless nickel, immersion gold. Typical thickness is 3µinch to 8µinch gold over 180µinch nickel.

### PCB Land Pattern Recommendation

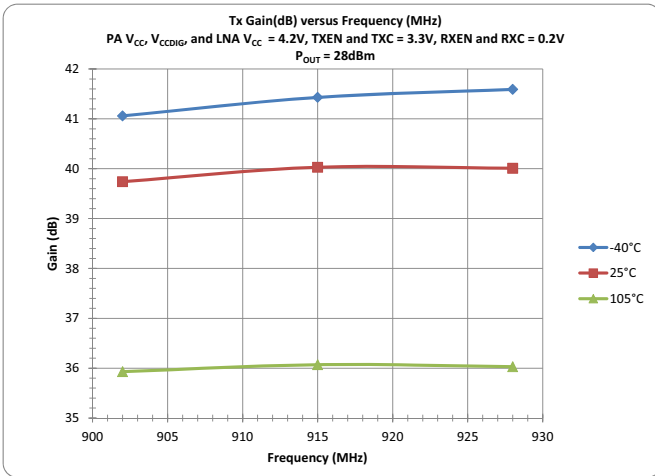

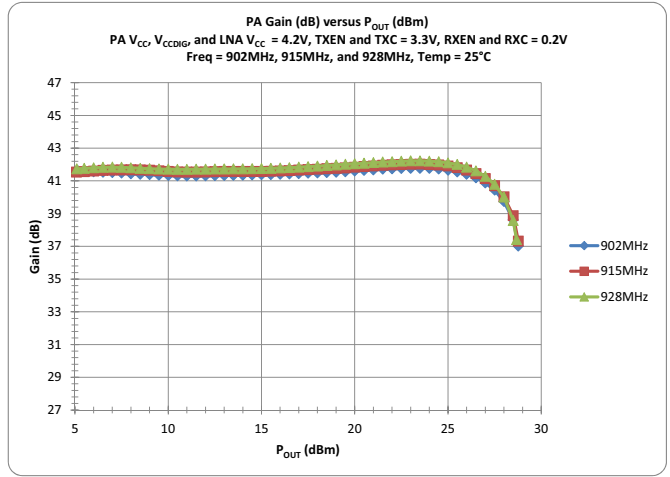

PCB land patterns for RFMD components are based on IPC-7351 standards and RFMD empirical data. The pad pattern shown has been developed and tested for optimized assembly at RFMD. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.
